NEXT MONTH

O UTWIT unknown human opponents in a fantasy avoid adjudicated by computer. Games moderated by computer are ripe for take-off in the U.K. In May we will give you a rundown on the no-holdsbarred computer moderated games scene where you have to stay on the alert even when you're not playing!

WITH Packman games cropping up everywhere.
We felt it was time we featured one ourselves.
Meteor Storm. Earth Port II. Spiderman and Anti-Gravity Flyer also feature in an issue packed with the best games.

JUST how far can you expand a Sinclair's memory?
Who produces the top games software for it? What
peripherals are available? Our May Hardcore section is given over to the possibilities of this unique
machine.

VIVE LE SINCI AIR

Dear Mr Editing-Person. I'll start by saying what a fab piece of material your mag is. Well thought-out, interesting, colourful, witty entertaining to the last computer-packed page.

But may I outline one rather feeble 1K Sinclair ZX81 games. I know the ZX81 cannot be described as the areatest personal computer but give it some

credit, please. If it's not too much for your megabytic brain to manage, could you print an exciting, highly interesting and graphically which will be a credit to all ZX81 owners and will prove to other more that it's more than a child's

Everyone knocks the ZX81 but I think other should follow Sinclair's basic, low-cost and compact machine which can be expanded to be more powerful through the addition of plug-ons, like memories, keyboards, sound systems etc. Walmer,

CLUBBING TOGETHER

We would be most obliged know that a computer club has been started in the Hartlepool area, via your

Mailbag pages. The first meeting of the club was held at The Welfare Hall for the Blind, Avenue Road, Hartlepool on Friday, February 26. Mr Harry Cuthbert is the acting chairman and Mr David Iones the acting sec. both can be contacted most evenings after 6.30pm on Hartlepool 71027 or 66001.

It is hoped that anyone who has an interest in most welcome. David R. V. Iones.

Hartlepool.

IN BLACK AND WHITE

Dear Sir. I would be grateful if you could help me with some information. All the computer chess games advertised seem to work on

Have you any knowledge of a straightforward chess computer i.e. to cater for the persons like myself who already own a chess board and pieces. Ronald Whiteside. Lisnasharragh.

Editor's reply: The only computerised chess qu on the market which you can use your own chess board and pieces with is made by Ace of Wembley. The actual computer looks very like a pocket

calculator and the moves made are displayed on a small L.C.D. screen. You just position your pieces accordingly. It's official name is Acetronic Electronic Chess and costs £24.95 from Ace

distributors. For a full list of dealers contact Ace at 3 Fulton Road, Wembley Park, Middlesex.

GETTING IT TAPFI

I want to use a Sinclair pre-recorded tape on my Sharp MZ-80K computer. As the Sinclair ZX81's are simple machines I thought it would accept it, but it wouldn't load

Could you tell me if it is possible to load these cassettes on to my machine and what I should do to make it work?

I look forward to the next issue of your magazine and hope you don't forget the P. Alsen,

Stockton Lane. York

Editor's reply: First the good news Mr Alsen, we will continue to feature the Sharp MZ-80K in the magazine. Now the bad news. You can only use cassettes which contain programs specially written for the Sharp with an MZ-80K. There is no way to convert your Sinclair tape to load, so I'm afraid you will have to either buy a Sharp games tape from a supplier or have a go at writing your own games.

CHEAP AND CHFFRFIII

I am in the process of purchasing a Sinclair ZX81 and would like to know whether or not a cheaper 16K RAM is available for it other than the Sinclair

I would also like to know if 16K is the limit of the ZX81's memory? If not, I'd like some details please.

I own a JVC T.V. cassette radio set and could you tell me if I can use it in conjunction with the ZX81 for the T.V. and cassette facilities? I would also like to know if the ZX81 can have sound facilities. V. Buchanan

Dollar.

Editor's reply: There are a couple of firms who supply 16K RAM packs for the Sinclair ZX81 which cost less than Sinclair's own version. These are: Audio Computers of Southend-on-Sea which

costs £33. Byg Byte of Petersfield, Hampshire which sells one for £42.95. Expansion boards are available for the ZX81 right up to 128K. Audio Computers is the firm

selling that, and smaller memory boards: 32K, £45; 64K, £73: 128K, £123, I'm afraid that your JVC is not one of the cassette recorders Sinclair Research recommends. I suggest you

ZX81 compatible cassette Alternatively, you could wait until we publish our next issue (May) when we will be featuring the ZX81

write to Sinclair and they will give you a full list of recorders. in our Hardcore pages giving details of peripherals available

ZX 80/81 HARDWARE/SOFTWARE

X KEYBOARD

Now with Reneat Key

A full size keyboard for the 80/81. The keyboard has all the 80/81 functions on the keys, and will greatly increase your pro-gramming speed. It is fitted with push type kevs as in larger computers.

The keyboard has been specially designed for the Sinclair computer and is supplied readybuilt. It also has facilities for 4 extra buttons which could be used for on/off switch, reset. etc. £27.95

The dK Graphic module is our latest ZX81 accessory. This module unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you 448 extra pre-programmed graphics, your normal graphic set contains 64. This means that you now have 512 graphics and with there inverse 1024. This now turns the 81 into a very powerful computer, with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there: it also has a spare holder on the board which will accept a further 4K of ROM/RAM, IT NEEDS NO EXTRA POWER AND WORKS FROM YOUR NORMAL POWER SUPPLY \$27.95

RAM 80/81

16K RAM

Massive add-on memory for 80/81.

16K KIT-A-KIT VERSION

of a 16K Ram. Full instructions included. All memory expansions plug into the user port at the rear of the computer, 16K RAM £32.95 16K KIT £28.95 2K & 4K RAM

Static Ram memory expansion for the 80/81. They both work with onboard Ram i.e. 4K plus onboard = 5K. This is the cheapest small memory expansion available anywhere, 2K RAM £14.95, 4K RAM £19.95

16K 81 SOFTWARE

As seen at the ZX Microfair.

DEFLEX This totally new and very addictive game, which was highly acclaimed at the Microfair, uses fast moving graphics to provide a challenge requiring not only quick reaction, but also clever thinking. One and two player versions on same cassette. £3.95 3D3D LABYRINTH You have all seen 3D Labyrinth games, but this goes one stage beyond: you must manoeuvre within a cubic maze and contend with corridors which may go left/right/up/down. Full size 3D graphical representation. £3.95.

CENTIPEDE. This is the first implementation of the popular arcade game on any micro anywhere. Never mind your invaders, etc., this is positively shining, the speed at which this runs makes ZX invaders look like a game of simple snap. £4.95.
Please add £1 p&p for all hardware, Software p&p free. Specify ZX80/81 on order.

ALL OUR PRODUCTS ARE COVERED BY A MONEY BACK GUARANTEE

THE SEARCH FOR SPEED

Dear Sir,
Congratulations for a new,
excellent and very different
magazine. The series on
writing Adventure type
games is superb and
Round the Hom was the

best program I've ever seen published for TRS-80 software magazine, but as yours is the only mag I buy regularly (grovel, grovel) I would like to ask a hardware question; I know he speeded up, but I'm not components have to be bought. Could you tell me how or suggest where a kit can be bought? I want it switchable between old and new speeds for purpose of tape transfer. My set-up is TRS-80 Model 1 Level 11 16K with cassette and Aculab C. Bennett

Bamkin-of-Craigs, Dumfries.

Editor's reply: According to Martin Soble of Tandy Corporation's

Corporation is merchandising department, it is possible to increase the speed of the microprocessor in your computer itself but he does not recommend doing so. He told Computer and Video Games that a couple of small declers sell kits to

carry this out, but he likened it to doing a "hot rod" conversion on a car. It goes faster but wears it out more quickly.

So if you want your TRS-80 to last, take Martin Soble's advice, you will be better off in the long run.

NIBBLERS NIGGLE...

Dear Sir, Having tried out the Nibblers program in the first edition of Computer and Video Games, I found that I could not fire missiles or drop bombs on the Nibblers. I am new to computers and so would not know where to start looking for the fault. My friend's father, who deals in computers, was also puzzled by this. I would be very pleased if you could assist me to solve the problem. E. Bryant, Hoxby,

York.

Paul Jay replies: There is, in fact, no fault in the Nibblers program. The trouble is that you have got on old PET.

an old PET. Many of the memory locations have been changed since the original machine came out. The location that has been changed in this particular program is 151. When the machine looks at this part of memory, it can tell if a key is being pressed down. All you have to do to make the game work is to change the 151 which appears twice, to a 515. This will also be neces if you want other PET programs to run on old machines. For example Dragon Druggin'.

THE RIGHT CONNECTIONS

Dear Sir. I have recently acquired a VIC-20 and after hearing from a friend about a connection to fit a normal tape recorder to it. I decided not to buy the £40 plus, special tape recorder. asked in the shop my they said they were expecting some in soon Impatiently I asked at another shop and they didn't know anything about it. Is the connection made by Commodore or by another firm? Nadeem Farugue Newton-with-Scales.

Editor's reply: A firm called Stack of Liverpool is in the process of bringing out an adaptor designed to link up a normal cassette recorder with the VIC-20, but has not yet brought it

But according to one of Commodore Business Machine's technical

Lancashire.

experts the adaptor, which is expected to cost between £5 and £10, is only worthwhile if you have relatively small amounts of data to store if you can't afford the price of a Commodore recorder.

Commodore's expert did say that the quality of material stored using this adaptor would not be as good as a Commodore compatible because normal recorders record audio signals rather than NRZI signals — the method used

to record computer signals.
Commodore itself does
not make an adaptor to
convert a normal recorder
for use with the VIC-20.

SYSTEMS ANALYSIS

Dear Sir,
As the proud owner of a
ZX81, I would greatly like
to expand it in all
directions. However, the
proliferation of add-ons,
software and books too
numerous to mention how
reduced me to gibbering

anacy! I would like to know how

for it is possible to enlarge the system capacity and capability. If the ZX81 possibilities are limited—without major surgery!—then I would seriously have to consider another system. I was horrified to see no less than 49 Sincleir XX8081's for sale on the magazine. Could it be that other ZX owners are losing the system. I was present the contract of the contract o

Who makes the 64K RAM slot-in mentioned in your January issue? Chris Wilkes Harefield, Middlesor

heart? Help!!!

Editor's reply: You can enlarge the ZXB1 up to 128K memory using a range of expansion boards. Audio Computers is the firm to contact at 87 Bournemouth Park Road. Southend-on-Sea.

Here is α list of prices: 16K £33 32K £45 64K £73 128K £123

Audio Computers will be happy to give you further details of goods available for the ZXSI if you get in touch with them.

THE PICK OF OUR **PII771 FRS**

The octagon puzzle which featured on the cover of our first issue certainly set your greymatter alight.

Over 700 entries of programs to solve the puzzle by computer, deluged our office and caught us quite unawares.

Whittling down all the entries was a long and difficult task for our judges but they have finally come up with the three best

To give everybody a fair chance we laid down a set of criteria for the judges to use as a guideline in making their comments. Entrants could score a possible total of 45 points for the programs submitted, but no-one managed a 100% score.

The most important aspects of the judging were on the standard of programming. Exactly how concise the programming was and whether it contained unnecessary frills into the entry.

Another important factor in judging was the speed each program took to find the solution. Highest marks went to those whose programs found the solution quickest. Further points were awarded if it proved there was only one solution.

The three to emerge as winners are Gorden Bennett of Hampshire, Adrian Womack of Doncaster, and Christopher Holt

The answer to our March Mind

Routines problem is that there

are 34 prime numbers. The high-

est is 95731 and the lowest is

13497. The total of the 34 prime

month's Nevera Crossword is

The correct solution to last

numbers is 1842502.

month's issue.

Gordon achieved the highest score of 43. Adrian got a close 41 and several reached the 40 mark. Our judges finally selected Christopher Holt's entry as the third winner because it was the host presented of the three tying programs.

Congratulations to the three final winners and our commiserations go to the other unlucky hundreds who entered

The winning program by Gordon was written for a Microtan 65 computer and earned high points because of its simplicity of execution and accuracy in programming. With his program listing he submitted documentation but none of it was in-depth details about converting symbols to numbers or letters. You also didn't have to sit and wait for a long time for the program to do something, which was a

common complaint. Another interesting feature of this program was that instructions were explained in the program itself, making it easy to use. The solution was found in one minute 44 seconds.

The other two winning programs were of an equally good standard of programming finding the solutions quickly. But they fell down on other points, particularly presentation. They were written for a Sinclair ZX81 and an Acom Atom.

Three VIC computers will be winging their way towards the winners as soon as possible. We wish the winners hours of happy programming and also offer our thanks to the many judges for their time and effort.

Confessions of a Bug

which we Bugs are putting in behind the scenes here I've nersuaded the editor to give me my own column to explain.

Changing Hearts in the March issue was one of our biggest successes - made all the more so by the fact that many readers managed to enter it first time

The listing itself was error-free but two all-important commas went missing from the accompanying write-up. Line 40 in the write up should read: G\$ = "ABDE, ABC.. BCEF. ADG_BDEFHCFI_DEGH.GHI_EFHI.

Alien Hunt in the February issue also caused some problems for readers whose Acorn Atom did not have sufficient of the necessary memory to run it. Unfortunately author John Kirk was all too quick to their rescue, suggesting that they remove instructions subroutine in line 1 and lines 32000 to 32111.

T. Hitch was put to work at the printers to give Doglight fans a little extra workout on the Apple in the February issue. He transposed lines 1160 to 1190 out of position. which itself would have been easily righted, but then he cunningly continued with:

ITS";M(2);"MISSILES"

which belongs to line 1309. Screaming Foul-up did the printing

run for the March issue and pulled seven lines out of the Air Attack listing. The missing lines are: 2050 LP = 0:K = 0:GOTO 100

2100 FOR ZQ =1 TO 21 2105 ZX =ZQ *41 +X +1: POKE ZX. 28 2110 BN = PEEK (ZX +41): IFBN = 32

THEN 2120 2115 GOTO 2200 2120 POKE ZX, 32: NEXT ZQ 2130 GOTO 100

Just in case any of you out there weren't appreciating the work

TESURROUND COVER NATURALWINGER

printed right and the winners' names will be published in next For more puzzles to tax your mind turn to page 83 where you will find this month's problems.

Upgrade your atom with our new low cost disc pack only £299 plus VAT

Acorn Computers Ltd...

ACORN Fulbourne Road, Disc pack for the atom COMPUTER Cherry Hinton, CAMBRIDGE

The disk operating system (DOS) decodes the following commands used to control the storage of files on disk: catalogue files on disk * LOAD load image of memory contents as file * SAVE save image of memory * DELETE delete file from disk * SPOOL store all printer characters on disk contents as file

* EXEC read characters from disk as if from keyboard The DOS also replaces the cassette operating system vectors as used by BASIC to allow the use of the

following commands in Atom BASIC:-

LOAD load BASIC program from disk SAVE save BASIC program to disk FOUT open file for output FIN open file for input SHUT close file EXT find extent of file PRT find value of pointer into file PUT out number to file BPUT put type to file SEUT put string to file GET get number from file BGET get byte from file SGET get string from file

These commands provide full random access of up to 5 disk files simultaneously

Atomcalc is supplied as a plug-in 4k ROM with an all-purpose planning and modelling program, It is so easy to use - If you can use a calculator you can use Atomcalc. No programming skill needed. The ROM creates an enormous grid of columns and rows like a ledger All you do is to enter the headings and formula once and Atomcalc does the rest. Supplied with a very detailed 30pp user handbook.

What will it do? Atomcalc can cope with anything from a household budget to company accounts. You set up a series of automatic calculating functions like totalling or percentages. Then fill in the columns with your figures and the program produces the answers. If you want to change one figure in the calculation it immediately changes the relationship of all the other figures involved. So, for example, you can see what effect on profit a 5% increase in sales might have or a

10% increase in production, or a 3% drop in transport. And do not forget you can print them out on an optional printer or How Can I Buy One?

Go to your Atom Dealer, or if there are none in your area just send a cherus for £39,10 (incl. VAT and P & P) to the address below. Credit Card holders can ring Cambridge (0223) 316039 and order direct.

Dept. 6 Acornsoft Ltd, 4e Market Hill, CAMBRIDGE.

Brand new colour board **NOW YOUR LIFE CAN** BE MORE COLOURFUL! Zuw

The board fits inside the Atom and generates colour output suitable for all makes of monitors and TV's

Two colour palettes can be achieved Red. Yellow, Green, Blue and White, Cvan. Magenta, Orange. In text modes this provides green on blue or orange on black displays.

Three outputs are provided:-- Red, Green, Blue drives at TTL levels with a composite sync, the polarity of which may be link selected.

- A 1v composite video in monochrome only. - A PAL encoded signal on Channel 36 suitable for feeding into the aerial socket on a domestic

You can fit the board yourself using a fine soldering iron or your dealer will fit it for you. The board can be used in a minimum Atom with the exisiting power supply, or if used in a maximum Atom a 5V exernally regulated supply will be necessary.

Available from all Acorn Dealers or direct from Acorn at £45.24 inc VAT and p+p. Credit card holders can ring (0223) 245200 and place their orders direct.

television.

KEEP THE ASSASSIN'S KNIFF AT BAY

Being the President of a small state can cause you a few problems Often your country is on the brink of civil war or revolu-

But as the head of the state your job is to ensure the smooth running of political life and aim to achieve prosperity for your people

That's just what you have to do in Dictator an adventure game for the ZX81 in 16K.

The object is to prevent your people revolting. At your disposal are the army and secret police who you can use to your advantage if the threat of a coup ariene

You must be vigilant because spies may infiltrate your close knit party. Assassination attempts are regular events.

To keep the people happy you have to make the right decisions

DICTATOR to maintain a secure economy. If you fail unrest could mean your

An eight page instruction booklet is supplied with the cassette giving full information A copy of Dictator can be bought from Bug-Byte for £9.

DEADLY BLADES IN THE NIGHT

Deadly blades flash as you reliv the duelling days of the eighteenth century in a darkened dungeon

You must kill your opponent after searching him out in Duel in the Dark, a game for one or two

The screen is divided into a rectangle of squares which forms your battleground. It represents phiests and walls a dungeon which has two windows. But you can't see anything because it's dark outside - none

too helpful The only good thing is that your opponent faces the same handicap - he can't see you pither

Objects litter the dungeon which are hazardous but also give you clues to your oppo nent's whereahouts

Both of you are given a dagger and a knife as weapons in the two player version. If it's in

DUFL IN THE DARK single player mode the computer

takes the role of a bear seeking you out. During play you discover

nformation about the dungeon's layout - making notes of the location of windows, doors,

When the crunch comes you have three methods of doing away with your opponent Fither throw the knife at him, stab him with your dagger or grab him and

Duel in the Dark costs £10.93 from Bexhill based Molimerx and is designed to run on a TRS-80

FACING THE GALACTIC WAR FLEET

SPACE FIGHTER

fleet

grapple him down.

Alone in deepest, darkest space you come face to face with a horribly beweaponed and

decidedly unfriendly galactic war With the stars your only com-

pany your mission is to find and destroy five enemy fighter craft. They patrol different sectors of the sky and when they are within range you line them up in your sights and blast them. Your armament consists of laser guns which instantly reduce the enemy ship to fragments of

space dust. The fighters are equipped with missiles and can return rapid fire

at your ship so you have to avoid destruction. Space Fighter is a re-vamped version of the original game and

now runs on a TRS-80 Colour Computer, Molimerx, the supplier, claims the game lends itself to colour graphics which make it more realistic.

You need joysticks and 16K memory as well as £10.06 to get the game up and running.

ultimate downfall.

HERE'S THE LATEST IN **BRAINWARE**

A band of roving aliens are scanning the universe for humanoids with the decidedly unfriendly aim of taking out their brains and replacing them with microchips. What do you mean you know someone they found already!? Your task is to defend your

ship from the aliens and escape the gravity beam which has sucked your ship into the alien cruiser's flight path. It is during a reconnaissance

mission that your android Fred spots the alien ship and warns you of their intentions. Your adventure leads you

ADVENTURE C through space into all sorts of

hazards. You explore computer rooms, an android pleasure room, nonetrate force shields and fend off laser guns.

Adventure C makes full use of the Sinclair ZX81's 16K memory packing in as much as possible. Artic Computing in Hull is the supplier and will sell it for £9.

Artic Computing is establishing a series of adventure games which are written in-house in machine code for speed.

GHOST OF A CHANCE

through to owners of the longawaited machine and Bug Byte has leant in quickly with some names

Kicking off the range is Vicman, the VIC version of the popular arcade game Pacman, Bug Byte says this game is a very good copy of the original with lots of little mazemen and a "glooper" who runs around the

maze devouring dots as he goes. Fruits appear in the maze when you amass a certain number of points and large flashing dots cause the mazemen and glooper to change colour. Sometimes the mazemen are in a consumable state and it's then that they run away from the glooper ... but be careful, they may suddenly turn tail and turn in nursuit of you.

so you must be careful manoeuvering your glooper along the paths of the maze. If you run into a phost your life is lost as he

anhbles you up. When you eat one of the hosts a pair of flashing eyes darts back to the centre of the screen You can use either inv-

sticks or keyboard controls to run the game, depending on your own preference The screen has to be cleared of all the dots to earn a new one

and a new fruit to consume. The colourful VIC is well suited to reproducing a good replica of this absorbing and addictive name

Vicman runs on the unexpanded VIC and costs £7 from Bug Byte of Liverpool.

The Kamirosmir Cruds are one of the most hostile species to be found in space — like Vogons except without any literary pre-

You only have two types of weapons to call on to defend yourself when you come across them in Outpost

space bar. The enemy's fire will

destroy your bases if you do not

stop them in mid-flight.

They are a propulsion unit and

a meteor shield. Your square channel chin has weak enote narticularly vunerable to enemy fire. Two hits on the same side of the ship spell death. One hit prevents the propulsion unit rotating the ship to that position.

If you overwork the unit it will overheat and stop working. Outpost is difficult to operate because you have to use eight keys to control the action. But

once you have mastered the technique it proves a demanding It runs on an Apple II in 48K

and is available from Richmond based SBD Software for £16.95.

THE MONSTER FROM OUTER SPACE

A bright red monster from space is still termenting Philips G7000 owners up and down the country, causing widespread frustration and havoc.

Running riot on video screens is Space Monster, which was recently topping the sales figures for Philips. The game is a space invader spin-off, but with additions which demand some quite different tactics from the player.

The space monster itself lurks at the top of the screen behind a bank of robots which form the main part of the tentacled blob's attacking force. Each robot is equipped with a cannon from which he hurls down bombs and a shield which he can use for protection. It sounds quite impregnable but the robots' weakness is that their shields must be held to one side for them to fire.

A tank is your means of attack and defence. You have three reserves and three shields to HINGS THAT

SAVE THIS POOR SOUL'S NECK

hide hehind. Whenever the high or his robots score a direct hit on the player's tank it turns him into a little human creature skating to find refuge behind a shield. Each time he needs another reserve tank one of the shields disapnears from the screen, leaving the player more open to enemy fire If he is hit while tankless the game ends in victory for the Space Monster

Space Monster is the closest Philips has come to a space

invaders' type game. But it does have some innovations all of its own which make it. attractive to would-be buyers.

The blob is quite obviously a thinking creature and a capable dodger of the player's missiles. It also has a mean streak which will send him hurtling down from the top of the screen to finish the player off, if it senses victory much more interesting than the

unthinking invaders. The two different varieties of monster also make a change from the usual green meanies and

their numerous imitations. The Space Monster Videopac is available from G7000 stockists and costs around the £15 mark. A worthwhile alternative to the

HANGMAN

Save a soul from transcending into the stratosphere simply by using your brain to unravel one

The game hangman which has long been a great favourite with schoolchildren has now been

transferred to your video screen. This game for the Interton VC4000 follows that old quessing game popularised years ago. The computer selects a word which the player, or players, must try

and quess. Quick thinking is also important in this game, because you must guess the right word before the man on the screen is hung. Each time you place a letter of the word incorrectly a section of a hanging platform and its scaffolding is added. Before These are displayed on the you know it the entire frame of the scaffold has been erected in front of your eyes. The next

stage is the completion of the victim's body itself. Whenever you make a mistake in the formation of the word one limb of the convict is added.

The game ends either when you have guessed the word correctly, in which case you emerge as the winner. Or, if you can't unravel the hidden word the poor

unsuspecting victim meets a very untimely and unpleasant death. Hangman is written in a 4K ROM cartridge and is produced

by Hanimex for Interton, It is available through the firm's UK dealers ranging from Asda Supermarkets to high street specialist shops. Hangman's retail price is listed at £22.95.

GO MUNCH IN THE NIGHT

PACKMAN

Atari is following the current trend of producing cartridges hased on the most popular arcade games.

The latest addition to be turned into video computer system form is 1981 success story,

Due out in distributors' shops in April, this version sticks closely to the original concept. You operate a circular mouthopening creature which speeds along the paths of a maze, sometimes referred to as a house. Littered along the paths are small dots, each one representing points, for the hungry Packman

to consume. Other characters in the maze

are ghost-like creatures which move out from a central square of the maze at regular intervals. These run around the corridors. sometimes chasing your gobbleman and sometimes with you in pursuit of them, if you have managed to eat an energy post.

Successfully chasing and munching a ghost, helps the player to score bonus points. cartridge costs £29.95.

screen where the action took place. And a fruit is displayed at the centre of the screen which can also be consumed for extra

With every cleared screen a new fruit from the series, which is worth more points, appears within the labyrinth.

There are three lives for your man to play with during the game, and as play progresses the number of ghosts increases, making your life more difficult. The game continues as long as you keep your lives without being devoured by the ghosts. When you clear the maze of all the dots.

the screen flashes up a new one. Available from U.K. distributor Ingersoll this top of the range

CENTRES TV GAMES CENTRES TV GAMES CENTRES

BAFFLED BY THE BLACK AND WHITES

BACKGAMMON, CHECKERS

Two traditional board game favourites have been given a new lease of life through the video medium

Checkers and backgammon have been transferred to the television set via the Interton VC4000 Video Computer system, for enthusiasts who cannot always find human opponents to play against.

Both are easy boards for the computer to display and combine simple rules with plenty of scope for tactical play so the computer' makes a worthwhile opnonent even it if it will have a tendency to play safe.

Checkers or draughts as it is commonly known, is displayed as a board and pieces and there is no deviation from the traditional rules. You can play either black or white - black goes first - and then try to out-think your computer opponent. Be wary of the computer if it appears to be offering up a sacrifice - it probably has something nasty planned for

As usual the opening strategy determines who ends up with the most kings and that is the player who will usually win the game.

Backgammon too keeps to the traditional rules but without the cambling element, it is not as skilfull as the original, It will, however, help to sharpen up the players' skill at outmaneouvering an opponent on the board. And it will teach beginners the folly of leaving an exposed piece in a vulnerable position.

For those of you who have never played the game, it involves moving counters around the board in the opposite direction to your opponent and trying to get yours home first - but if a counter is left alone it can be captured by your opponent and returned to start.

These cartridges are available from retailers in the U.K. from specialist dealers and some large department stores. The retail

GRAND PRIX

Turbocharged cars are currenth burning up the formula one race tracks - and now you can catch un with these high powered machines in this latest Activision

game. You are at the wheel of a highly tuned turbo race car lined up on the grid for a Grand Prix. The circuit ahead is filled with numerous hazards which you must overcome with expert control of the Atari joysticks. Apart from avoiding other vehicles watch out for oil slicks. If you

drive over them you're taking a risk and it could cause a multiple Manoeuvring the car round the circuit is tricky. Not only are there sharp bends to contend

with but you also have to drive your car over narrow bridges. The race is run against the

clock which means you must

combine speed with safe driving to come out on top.

Grand Prix is produced by Activision for the Atari Video Computer System and has good graphics and sound effects making the game more realistic. It sells for the standard price of £14.95

· Philips' new concept in video games combining a television adventure with an actual playing board is to be unveiled this month

Quest for the Rings which featured in our March issue, is scheduled to be on distributors' shop shelves in April. A price is still to be decided but it is likely to be more expensive than the standard Philips Videopac price (F14.95)

TAKE THE TRENCH TO **DARTH'S STAR**

STAR STRIKE

Relive the final conflict of Star Wars against the Empire's Death Star when failure means your planet's destruction.

Take the role of Luke Skywalker on his do-or-die mission to blow up Darth Vader's giant man-made planet. In Star Strike you have to guide your Star Cruiser through space, dodging enemy space fighters as you travel to the Death Star.

Missiles whistle past you and you must retaliate with the deadly laser guns positioned on your star cruiser. If you successfully navigate through the space hazards and reach the narrow trench which you must fly along to destroy Darth Vader

Expert flying skills are vital for success because the trench is lined with obstacles and filled with enemy fire. Use your photon torpedoes and maneouvre your ship away from the attacking crossfire like laser posts

positioned on the walls and floor. Judge the distance from your ship to the trench carefully and when you approach the last few miles focus your sights on that single exhaust vent - the only weak spot in the trench

If you've got an Intellivision, Star Strike is available from stockists now, the price is £19.95. Intellivision owners can also subscribe to a new newsletter produced by Advanced Consumer Electronics, which gives details of the latest cartridges and new developments planned for the Intellivision and Acetronic MPU1000

CHESS

A

Will a chess computer ever be table to take on a grandmaster and give him a challenging geme? Well, moybe the masters of the game will become wary of the machines after redding the results of a fascinating experiment reported by grandmaster Raymond Keene in Massacre at Merano — his account of last year's world championship between Anatoly Karpov and Viktor

After the match some of the positions from the eighteen games were put to Sci Sys Chess Champion Mark V, one of the strongest of the commercially available chess machines.

The results were impressive on a number of occasions the computer was able to improve on the play in the match. The following position occurred in agmenine with Korchnoi White.

Korchnoi has just played 41.

Q-N1ch and Karpov now replied
41.

P.N3 and the game continued 42. Q-KB1 (forced to avoid
mate on KN2). Q-B4ch: 43. K.R1,
Q-Q4ch and white resigned
(ortier 44. K.N1, R-Q8 wins the
queen). This win gave Karpov a
4-1 load — 4-1 lawd — tawas did not count in

It is hard to imagine that Black's play can be improved here, but in the diagrammed position Chess Champion Mark V, after about 30 seconds analysis, found the improvement

41....R-QB7!
This kind of move is difficult for a human player to perceive. since it pins Black's rook against his king, an action which tends to be avoided instinctively by strong players. In this case.

White again has to play 42. Q-KB1, to avoid checkmate and then 42. . . R-B8 wins White's queen, more quickly than by the line chosen by Karpov!

In the next position, Korchnoi — Black — with very few minutes left to reach the time-control on move 40 had hastily moved his queen to Q4. Karpov now has 35 minutes to make his next move but — probably to keep up the pressure on Korchnoi — he replied instantly and played 40. N-B1 to save his

Korchnoi now played 40. . . . B-K5! With an irrestible attack on

White's king knight pawn.
Karpov played 41. B-B4 and
adjourned the game until the
next day, but resigned without
resuming — after Black's 41. . .
BXKNP: 42. N-K3. Q-B6: 43. NxB,
R-K7: 44. Q-Q1, QxBP-h: 45. K-R1,
QxN mate is one likely continu-

Karpov's blunder in the diagrammed position gave Korchnoi his first win of the match.

How did Mark V handle the position? After 38 seconds' analysis, it found the far superior alternative 40. N-K21 Now Black cannot take the knight without losing his queen and white threatens 41. N-B4 which would fork Black's good attack the queen pown and defend White's own king knight pawn. These and other examples

Keene, not least because of Karpov's decisive and accurate play throughout almost all the match. The same machine scored a further success in a challenge contest arranged against gradmanter Dr John Nunn — an extremely strong chess-problem solver — at the end of a recent international tournament at Brighton. Man and machine were each set six difficult problems, selected by the vice president of the Problem Commission of the International Commission of the International Commission.

One of the problems was this prize-winning composition by the Soviet problemist L. Zagoruiko, which appeared in 1972.

It is White to play and mate in four moves. Nunn was unable to find the solution to this extremely difficult problem, but the Mark V did so; in fact it found three solutions — an extremely embarrassing outcome since a problem is considered spoiled if there is more than one solution found.

. 8	Ω				
100	100			4	
100	8		1	Â	Ņ
₽.	五分		HH		-
line"	1		두	2000	R
г.	1		â	200	100
30	â	F	7	100	

As an indication of the complexity of this problem, the reader is invited to work out the analysis after the key move 1.

For a computer to do this is impressive, but to find two other solutions was beyond the powers of the many problemists who have examined the position since then.

However, there is a consider able difference between analysing a problem position and play

The Mark V's achievements should not be taken to suggest that a grandmaster program is imminent, but they do show that in some areas of the game computers are already capable of more effective deep analysis

BRIDGE

Here's how the Fidelity Bridge Challenger dealt with a recent hand encountered during match-play.

Although the Mark II Challenger has the facility of generating its own random deals it seemed more sensible to try it out on an actual hand. This way you get a human comparison as well. This was the hand, dealt at love all:

North S K Q 987 HQ17 D Q 10 7 West East S I 10 SAS H A 10 9 4 H K 6 D A19862 D K 5 3 CAI5

South H 8532 D 4 C 10987

Setting the Challenger aside for a moment, if you were a bridge player, in what contract would you like to play the East-West cards? Six Diamonds is undoubtedly the best spot.

It makes if the trumps are 2-2 or the Queen is singleton and there is the extra chance that even if a defender has started with a guarded Queen of diamonds he may have to follow to three rounds of clubs.

First Challenger was set to work with the instructions that it was playing a weak no-trump (13-15 points) and that there was no opposition bidding. Its

West	East
1C	1D
1H	15
3D	4NT
5H	6D
nass	

Not at all bad! The One Spade bid was 'fourth-suit forcing' in the best modern style and both halves of Challenger's split per- the difference in valuation is sonality valued their hands well after that.

RY AI AN HIRON

were instructed to play a strong no-trump 16-18 points. It shouldn't have made any differ-

ce	to the final	contract, but:
	West	East
	1NT	4C
	4S	5C
	5S	7D
	pass	

The Four Clubs bid - and indeed the Five Clubs bid were Gerber and on finding South with two Aces and two Kings North plunged on to the grand slam. It is perfectly true that if South had held DQ as well

as his other high cards he would have hid exactly the same and Seven Diamonds would have been a doddle. As things stand, it is not an outrageous contract. The next thing to try was a

little interference bidding. Suppose that over One Club North overcalls with One Spade. Should this affect things? Apparently it did for now the bidding went:

South West North East 10 1S 2D nass 2NT pass 3NT pass pass pass

Let us be fair. The grand slam was not too wild, the small slam distinctly better, and nine tricks in no-trumps were simple. But intriguing.

For a second run, East-West cards? It was in this area that

Challenger Mark I had been at its weakest, failing to draw trumps or sometimes drawing them too enthusiastically.

It had never seemed to count tricks and refrained from taking finesses that were necessary. Perhaps over-zealous advertising had suggested that Challenger played the cards well. Both large stake money matches and legal action were threatened by its detractors and certainly the play had to be tightened up.

Even now there are problems. It is extremely difficult to lay down a set of anxioms on how to plan the play of a hand - there are so many variable factors.

On the deal we have been considering Challenger had no trouble at all in its Three notrump contract. After the lead of a top spade, it cashed its nine top winners - albeit in a slightly odd order, but efficiently enough.

In the Seven Diamond contract, Challenger won the spade lead and, playing to the percentages, correctly played off DK and DA. But the Queen did not fall and the slam was doomed.

But when Six Diamonds was the final contract, things weren't so good. After taking the spade lead and trying the top trumps unsuccessfully, the normal play is to try the clubs, hoping to get the losing spade away before the defender with the Queen of diamonds can trump.

Any tournament player would see this immediately and would waste no time in trying it out. Not so Challenger, who rather weakly conceded a trump trick and so went one down without even trying the Clubs.

Perhaps he wanted to get started on the post-mortem and criticise his partner's bidding!

Incidentally, the best line of play doesn't work, but a finesse of DI the second round of the suit would have done. Whatever What about the play of the Challenger's faults, he doesn't

INNOVATIVE

TRS 80-GENIE SOFTWARE

from the professionals

First there was Invaders, then came Asteroids, and now DEFEND!!!

Carrying on in the same tradition, Defend is a fast arcade type action game, complete with sound effects. Enemy Machine language, of course, for speed. A matter of taste, but we think it beats Invaders and Asteroids. Suitable for TR3-80 Models I and III and all Genie models.

£13.00 + V.A.T. = £14.95 Tape (16K) £16.00 + V.A.T. = £18.40

Ever since Prestel started three years ago, games have been the single most popular thing on it. That's not what it was designed for, but games are a very good way of finding out about Prestel. There are now dozens of different games, ranging from short and simple ones to fairly complex ones.

Although Prestel runs on comnuters, there is a vital difference between it and even the smallest micro-computer. Prestel has no processing power. It cannot perform calculations, store variables or do clever things with the display - at least, not at the moment, but it's coming. What Prestel does have is simplicity, colour and routeing. All games are therefore essentially games of choice.

The key point about Prestel is that it is a computerised information system that anyone can use. All you need is a numerical keypad, and with that you can control and drive the computer. You don't need to be an expert.

Colour is a very important element in Prestel - it gives it much greater impact than ordinary monochrome computer displays.

There are six colours, plus black and white. Three are the primary colours - red, blue and green. A colour T.V. screen is coated in thousands of phosphor dots which give out these colours.

If you mix the primaries, you get some surprising results red and green together produce yellow. Blue and green become cyan — light blue — and red and blue is magenta. Mix all three primaries together to get white.

If that puzzles you, think what would happen if you could shine all the colours of the rainbow back through a prism. You would not get a muddy brown colour, but vivid white. It's the same on g T.V. screen.

Routeing is the secret weapon in Prestel. Each page on a T.V. screen has an invisible "back" side to it, with various bits of information on it.

The most important thing after the page number — is a list

of other page numbers - up to 10 of them. Suppose you are on page 12345, and number three on the routeing list is 7654321

If you press three, the Prestel computer is programmed to search that list for number three. and pick out that new page.

Then it searches for that particular page among the 200,000 stored on every Prestel computer, and sends it back down the phone line to your set. The amazing thing is that all that takes only a fraction of a second. And it can be repeated as many times as you like. It is as if you had a filing cabinet from which you could extract a sheet of paper in an instant - and that sheet could call up further sheets just as fast.

This facility presents great opportunities and challenges for Prestel designers. Effectively it means that you must think in ten-dimensional terms.

Any page can lead to any of ten other pages, which in turn can lead to ten further pages, and so on, for ever. It is almost impossible to put that down on paper, which is only twodimensional, and things like flowcharts are usually little help

A Prestel designer therefore has to visualise a logical path

through a maze of information and allow for all the alternatives

It can get pretty mindboggling at times, but it does provide a useful mechanism for games. It means you can provide a range of simple choices. All the player then has to do is to key the number of his choice, and this calls up the result with a new set of choices.

A good example is a game called Superbike on 4782111 (pictured above). You are racing ex-world champion bike racer Barry Sheene, and you have to make a constant series of choices, whether to overtake him on the inside or outside.

This routeing structure is the basic mechanism of almost every Prestel game, and a look through the games index shows the ingenuity that's gone into devising variations.

By providing a steady series of choices, it can provide a large combination of different possibilities. The catch is that if you play the game again, you get the same choices. There is no randomising element

Another catch with designing a Prestel game is that you need to provide for every conceivable possibility, otherwise some players are going to get stuck. That can involve large numbers of Prestel pages for games where there are many choices. Think, for instance, how many different variations there can be in Noughts and Crosses. On Prestel that requires several hundred pages! Prestel games are not as

"intelligent" as most microcomputer games. But there are dozens to try, and new ones being devised all the time. Now that you know how they work, you'll enjoy them even more!

arcade

KFFPING WARFARF IN PERSPECTIVE

TIPS ON BATTLE ZONE

Patience is not usually demanded of arcade players who are happier feverishly pushing buttons to destroy as much as possible hafara the next missile with their name written on it homes in

Battle Zone a unique game where the player is encouraged to manneuvre until the right opening to hit back comes along.

The name simulates tank warfare giving a view from inside the tank. Tank controls are also faithfully dunlicated with two levers which can be pushed into forward or reverse position simulating the two tracks of the tank.

Beginners quickly learn that pushing both levers forward sends their tank off in that direction while pulling them back sends the machine into reverse. With one at full reverse and one at full forward the tank turns quickly on the spot.

But even with a good shooting eve this knowledge is not enough to help a player survive for long. As turrets swivel in your direction, the best tactic is to go off diagonally to escape.

This is achieved by pushing one lever hard forward and the other only halfway forward. The enemy's shells will fall just behind you. When you have gone right past the tank, check the radar to see the enemy's position behind you. Then reverse hard until it appears on the screen quite close up and turn on the spot. You will have two chances to get in a shot before the tank is in a position to fire at you again.

If you miss with both then repeat the tactics. One danger is that you may run into the enemy as you reverse and then you will be helpless but the radar check should prevent this.

After 30 000 has been scored the super tanks are unleashed these turn much faster but the same tactics work, although you

will only have time for one shot. Among the other inhabitants of this machine is a flying saucer which flies swiftly along the back

of the plain These are well worth hitting if they pass in front of you (5.000 points) but it can be lethal to chase them, even though they don't fire back, as a tank may use this opportunity to creep up on

With the missiles which fly towards you from the back of the screen, it is possible to increase your chance of hitting them by going into full reverse and wait-

ing until they get up really close It is also possible to put an obstacle between you and the missile which will cause it to miss but it will come back to try again - be ready for it

A good player uses the radar to place tanks as half of them will materialise behind you. Scoring 150,000 will give the player a 15/20 minute game but beginners should watch for games which offer extra tanks for your money. to learn on Our thanks go to Simon Eyre of Waterlooville, in Hants, for the tips.

THE RECORD BREAKERS

machines is turning into an 30.100.000 knocked up in 50 èndurance test as much as it is a tast of skill

This is proved by the fact that four students from Kent University are planning to spend eight

days at the controls of an asteroids machine to out their names in the record books. David Birkett David Hill Tony

Thomas and Alan Tilling are the four whose endurance will be tested in shifts on the university's machine in Canterbury. As this issue goes to press the university's rap week will be taking place around the four of them as they attempt to return an unbeaten score of 100 million.

If their attempt succeeds it will leave the present world record for dead. Atari, which manufactures the Asteroids machines, monitors the world

hours by a New Yorker.

David Birkett claims all four Kent players have previously been over the million mark: "I have scored five million in a

double game which lasted eight hours and we were left with 113 "We will have no shortage of people willing to invigilate the attempt as we are being spon-

sored for the rag week charity and any money we make will be going to spina bifida sufferers. Are you record-breaking material? From our next issue we

will publish some of the hest scores we have heard of on popular arcade machines to give top scorers something to aim at. If you can beat our highest scores and are willing to prove it. please write and let us know.

ROCK BASHING

After Asteroids, came Aster De Luxe and now Space Duel continues Atari's efforts to turn rock-bashing into a fine art. Space Duel's asterpids are far

from featureless chunks of space debris though. They come in a multitude of different colours and whirl through space, breaking up

and they move around the screen SPACE DUEL but moving as one. under fire into smaller segments

of themselves. Alien spacecraft still frequent the nathways be tween them and your craft is still equipped with shields to protect itself from rogue meteors. But the most interesting fea-

ture of Space duel is that two people can play at once. It is nossible for both to take to the screen as enemies and go individually for a high score, or play as a team to knock out as many asteroids screens as possible between the two of you

A further break with tradition is that the two spaceships can team up to give real fire-power. A chain is tied between the two

in tandem, firing independently This takes some getting used

to and teamwork is very important when moving out of the way of an oncoming asteroid. One craft can pull the other out of harm's way, but if both try to go in different directions at once, the meteors will come out on

The advantage is increased fire power which can blast an asteroid out of harm's

way very quickly When both craft are on the screen at once, a good player can

help a beginner to pull through as the game continues until both have lost the required number of

1 CTRON

HERO WITH A YFLLOW STRFAK

The Amidar may look like cuddly toys but their touch is deadly. The game which is named after these creatures combines the fashionable arcade themes of

maze chase and space capture. In Amidar you take the part of a gorilla, who swings around the screen on blue bars which are covered in white fruits As he moves along the bars he clears them of white fruits. If all four sides of a source all cleared the

ally the screen becomes a patchwork of red rectangles. There are seven Amidars on the screen. One runs around the outside four corners and the other six move up and down always turning the nearest corner These creatures are not as intelligent as the Puckman "ghosts" when it comes to hunt-

ing down their prev. All the dots must be erased to clear the screen and start on the second area of the game. This time a framework of red lines comes up on the screen and the player is transformed into a paint roller. The Amidars, which resemble toy cats, still undertake their regular patrols of the

The aim on this screen is to use your paintbrush to pick up a vellow streak at the bottom of the screen and extend it. With the Amidars making life as hard as possible you first have to run the vellow around the border of the nearest rectangle, filling it in with a bright green and pocketing the bonus score which the

space previously featured. From this start it is possible to fill in the entire screen, with the really big bonus scores waiting

for you at the top. It is important to keep a cool head as the Amidar are quite capable of turning away from you even when they seem to have you surrounded. Just keep a check on where the next corner comes up and be sure that they will turn down it.

LADYBIRD KNOCKS OFF THE SPOTS

LADYBUG

Any gardener will tell you that ladybirds are a force for good on the rosebushes. They are now also undertaking

heroic feats in the arcade in a new maze game. The player takes the part of the ladybug, which also gives its name to the machine and sets

off on a spot consuming trip around the maze In this game the spots are few and far between and the pursuers are in the form of large blue beetles which try to corner

your rampaging insect. But you do have one big advantage over your adversaries. your ladybird can walk through the maze walls, as these are hinged doors which the creature

As one way opens another is inevitably closed as the door swings around in 90° to seal a different passage. The blue beetles cannot pass through

can nush onen

The good player will plan to block off the beetles completely, surrounding them within four doors and leaving them helpless.

EXPLORE THIS OH-SO LENGTHY TOMB

The treasure of the Pharaoh's tomb is awesome - but so are the creatures that guard it! The Earl of Carmarthen's

expedition into the mysterious depths of King Tut's famous pyramid proved hazardous - but arcade players have to face even more terrors

The explorer who braves this video ovramid resembles a cartoon prospector character comnlete with a husby white moustache and with tools strapped to

This treasure hunter is also armed, which is just as well because he will have to face a horde of guardian creatures in this tomb.

This motley crew of monsters include a mummy and a cobra as well as some less explicable dungeon denizens. Their touch is

deadly. The labyrinth which leads to the treasure is long and tortuous.

These blue beetles appear rather slow and cumbersome and even a beginner has a chance of doing well against them. But these are later replaced by some faster pink beetles who track down the ladybirds much more swiftly.

An interesting game for the beginner but the controls for the ladybird are not designed for fluid movement which can result in frustration when they do not respond quickly enough.

TUTANKHAMUN

The monsters hunt in a pack some trying to get in behind you and others trying to draw your fire before leaping into some half forgotten recess.

Your explorer has a limited amount of ammunition in his weapon which occasionally needs replenishing But his main deficiency is that he can only fire horizontally and is in real danger if he ever gets trapped in a verti-

cal part of the maze. To help him avoid this happen ing the top of the game screen offers a "radar" display of the whole maze. On this the monsters can be seen as white blobs. converging on you from the far end of the maze

Although it doesn't help you much in dodging the advancing horrors, it does prepare you for their charge so you can ensure a long horizontal passage stands between you and them.

You have three lives to try and make it to the treasure but they are not nearly enough especially since, you are returned to the beginning of the tomb each time the monsters catch you

The biggest danger among the first batch of creatures is the sarcophagus-like being which is invulnerable to your fire - or so he seems at first. In fact a sequence of three hits will make him turn away and rethink his avenue of attack

The Sinclair ZX81 has a real poker face—it gives nothing away about its hand. No heads buffing an elack high and you won't notice its RAM-pack trembling with excitement if it holds of tall house. In draw poker, claim the best players, the early part of the game is all antimematical odds and the final betting is all down to psychology. This program will hardly give the ZX81 a believable personality but it will help the unimitated much to gamble on them. The ZX81 deals out two poker hands, one to itself and one to its opponent, you.

sibilities of your hand, you must key-in how much money you cre willing to gamble on drawing the right cords against the ZXB1's hand. The ZXB2 will all always over your bet and often give you odds if it thinks you have made a rash decision. Then after you have changed your hand in search of that elusive full-house, the ZXB1 does the same and it's winner takes all. Not quite Cincinnati Kid stuff but it will give a good understanding of the game and show why experienced gamblers never draw to an inside straight. After all everybody should know how to play poker, it only to help them understand why the west was

your sector, GOOD LUCK.

MESSAGE TO STARFIGH-TER: Your mission is to destroy enemy craft and bases in this sector. Our intelligence service has been unable to obtain exact locations of these targets but your shipboard computer will aid you in the search. Your ship is armed with neutron missiles and phaser weapons. Beware of asteroid storms in

OK space fans — the object of this game is to search and destroy targets positioned randomly around the galaxy — which in this case is represented on the screen of a 40 column PET.

The game uses the whole screen for the galaxy, which is poked into position This allows moves and action to be displayed as and when they happen. A second screen displays the co-ordinates of targets, starfighter and starbase, plus the condition of shields, energy, weapons and the number of targets available. The starlighter which you

pilot can stock up with weapons and refuel at a friendly starbase. All major parts and sub-routines of the program are prefixed by REM statements describing their

function. Other significant parts of the program are: Line 119 — number of targets per sector. Line 125 — frequency of starbases, Line 142 — frequency of asteroid storms. Line 150 - hostility of the targets, this increases as the number of targets decrease. Line 158 - frequency with which the targets move and attack. Line 620 - frequency with which new targets enter the current sector during combat. Lines 899-910 - prevent the program crashing by loading the

commands into a file. 50 REM STARFIGHTER 55 REM P. B. MORGAN. KREGSPIEL

Wargamers have long realised that computers would add a lot to their hobby.

When the ranks of carefully painted warriors have been moved into their starting positions, the game proper gets underway only through some persistant dice throwing and careful consideration of tables.

The microcomputer can make short work of these feaving the general five to concentrate on his tactics. And although the game is cettainly not as picturesque, it does mean that wargamers without the necessary patience to spend time building up and deporating their armies.

Ron Potkin's Kriegspiel is based on a Second World War tank battle and has become an extremely popular game on the Tandy. We'll leave it to Ron to tell you a bit more about BY RON POTKIN

RUNS ON A TANDY TRS-80 IN 16K

Each must be oriented left or right so squares and oblongs are out.

Keyboard characters are unrealistic. When playing, one should be totally involved and feel as though the battle is really happening. I am atgaid the letter "A" for army does not turn me

Before getting involved in the detailed programmying, you should understand, the overall operation of the program. There are tow rarray which control all movement and attack these are; Video screen: fun the program and put the hex board on the screen. Each bar is numbered according to jfs-first "print".

About three years, ago / I bought several bowes of those anall one-left high plastic soldiers. They represented the Franch and British from the Eartle of Waterioc. In all these dratte of water months were spent painting the detail or gach place using a magnifying glass. The next three months were appeared to the seven present that, my optimization of the sight of Seweral hundred warriers finding up for Butter is very appearance of the seven present the se

ing but I felt there had to be an easier way.

All this occurred about 12 months before the "Birth of the Byte." I had played several commercial wargames and although they were very interesting, there

they were very interesting, there was a lack of realism because I felt that a General should be allowed to concentrate on the

rolling dice and consulting charts. The TRS-80 has changed all that. Think of the advantages: It determines when conflict should occur and the nature of the conflict.

It rolls the dice and tesolves all combat between opposing sides. It is an importial referee and it

will not tolerate heavy breathing or that gasp of relief that moves a complete armour division across the Mediterranean. Real bidden movements is possible. No longer does one

need to write down on a piece of paper, the current location of each hidden piece. It was with these points in mind that I wrote. Kriegspiel. While designing the game, I

had to consider:

The minimum size of hex.
The shape of each piece.
The necessity to be able to distinguish pieces on each side.

I finally determined that four bytes were required to build up a g neat shape and meet, all my requirements. After allowing for a line of messages and spaces, t between the pieces. I had a board of about 120 hex. In Kneigspiel II, - have adopted a different approach so that it is possible to have 500 hex. I think you will enjow the game.

I think you will enjoy the game. My son Leigh, and I have played it many times and have developed our own personal strategies. Invariably, one scenario becomes particularly interesting and we play it over and over. Kriegspiel II is a further

development of this game with more pleces, minefields, n weather, recruiting, a larger board and other features, but the same basic strategies apply. I am not going to dive any

advice on tactics other than to urge you to study the table of odds very carefully before you attack

position. The top left-hand heads

and so on up to 60 in steps of 8 The second line runs from 64 to 120. Note that alternate rows are offset by four so that the hexes fit together. The same format continues down to hex number 956 leaving the bottom line for messages. Let's look at a section of the screen using hex number 400 as an example. Now deduct 400 from every number to arrive at the offsets. If we know the direction. These enable us to move a piece from one hex to another. We could calculate them but it is faster to use "ondirection-goto" (Line 21500). As

Piece table "PC": This is 3 32 by 6 array and contains details of the 16 pieces on eith side. The first column is the current her manner position on the screen. The second contains the type of piece-tank, infantry, engineer or capital. The other four columns contain combat, pointers which will be described later. When a

an alternative a table of values

could be used

piece is eliminated, column 1 is

The board "BO": This is a 16 by 16 array, including the zero index and is an internal representation of the map Each indexed position is equal to one hex on the screen. Each vacant position on the screen is set to zero on the heard An occupied position contains the index of that piece in the piece table. Positions occupied by mountains contain -1. -2 or -3 according to the type of mountain

Characters "PC\$". This is a 7 by 4 character string holding the shapes to be printed on the sereen The correct character is obtained by means of its index in the second column of the piece

It will be apparent that, using the information in each of the every direction using "Search." arrays, we can easily move from looking for an opponent. one table to another. There is one missing link: This is the con-

version from the hex number to the board coordinates which is carried out in line 2100: Y1 - INT(P/64)

X1-(P-64-Y1)/4 (Where "P" is the hex

number) Much of the program is concerned with the manipulation of these arrays. It is in motion by putting the initial hex position of each piece in each array and then running through the piece table promoting for a decision on each piece in turn. Assuming the piece is on hex 400 and you type direction 6, the program calculates the board coordinates) checks that have when we finally reach line hex 352 is vacant and, if it is,

moves the piece. It now checks the six hexes surrounding the new hex to see whether it is next to an onponent. One side has indices 1 to 16: the other 17 to 32: So if piece adjusted on the board and video 12 (less than 17) is next to piece

24 (greater than 16), an attack takes place and any further

movement ceases The following is an outline of the movement sequence:

1. Line 200 controls the whole and changes sides.

2 Turns are determined by 5 in line 1000 which sets the va able 1 to either 1 or 17 indicating

the index of the first niece to be moved 3. Gets the hex number FL, the number of moves "MV," and the

character "FLS." (lines 1010. 4. Promot for a decision by flickering "FLS" and "MV." (line

5. If the input is a number.

check if valid and either move the piece or continue promoting (lines 1050-1210) 6. Checks during movem (line 1065) for the winning condi-

7. Line 1075 checks "river crossing." If this is true, an extra pevement factor is deducted. 8. Line 1182 checks one hex in

9. Intermingled in the coding is the Hold routine. Follow this through watching the variables "K1." and "HL" in lines 1000, 1010, 1017/8, 1047/8, and 1218

10. The "C" "S" and "F" commands are easier to follow. but note that "C" jumps immed ately to line 1300, whereas F carries out a full check of pieces that have not been prompted to check for nossible attacks. Since this involves checking six hexes for every niego it is a slow process and therefore, if it can be seen that no pieces are adjacent, it is better to use "C.

Let us take stock of what we 1300 - the start of the attack

1. The board, video, and piece table have been updated in respect to all movement. 2 Mountains will have been

when they have been eaten away by the engineer. 3. Columns 3, 4, 5, and 6 of the piece table contain information regarding attacks. Note that if

column 4 is set to one that attack will be automatic and requires no game. At the end of a player's prompting. If it is greater than 1. turn, the program returns here then a decision is required by the

COMBAT WAR SEQUENCE III

Lines 1305 to 1500 are a prompting routine and settle all attacks. Note that the use of the flag "22". This is set to one if an attack is found. If it is zero at line 1550, it means there are no attacks and the combat sequence is finished

Lines 1600 to 1745 are more complex. They are concerned with determining which pieces are involved in each individual combat whether the defender has support; whether the attack is across the river; and finally selecting a random result from

the attack table. A defender table "DR." is set up. This holds details of each defender as it is found in the piece table (line 1620). The attacker is put in the attacker's table "0" (lines 1680-1690). We now go through the rest of the niece table searching for any other pieces attacking the same defender. These are added to the "Q" table. As each is added, the ettack factor "AT" is increased (and increased again if the attacker is a tank), the river crossing flag is "and" ED with DR(3) and column 3 of the

niece table negated so that piece cannot be involved in another attack. Lines 1700-1710 calculate the

defender's factors and go to the subroutine at 4000/4200 to check

or support Lines 1720-1740 calculate the attack ratio and find the appropriate column in the attack table from which it selects a random result. If you are like me, you probably find typing the rules is drudgery, so if you want to see, the attack table look at lines 20162-20167. Now read through lines 40192-40415 which tell you the outcome for each value in the

Note the use of the flag "RV"," which indicates whether the attack is across the river. The ules state that the defence factor is doubled unless the defender is also being attacked on the same side, of the river, Put simply, this means that if the river flags of all attackers (column 6 of the piece table) are set. then the attack is across the river. If any flag is not set then all others are nullified and defence is not doubled. This result is very easily obtained by using the "And" instruction and what at first appears extremely complex is resolved in a single

instruction!

Lines 1750 to 2500 carry out the results of the combat result "R" as follows 1 Exchange:

The defender is automatically eliminated (line 24000), but a test must be made to check how many factors the attacker had (line 1706/7). If they were less or equal to the defender's then elimination is automatic Other wise the attacker is prompted for the pieces to be eliminated 2. Attacker Eliminated:

This is automatic and all attackers are eliminated using the routine at line 25000 3. Defender Eliminated: This is automatic and the

defender is eliminated using the routine at line 24000. 4. Defender Betreats:

The player is prompted for the direction of retreat and a check is made for legality. If there is no retreat then an "E" is typed and the piece is eliminated. The variable RD" is a count of the number of hexes moved. Remember that the defender is now allowed to move next to an opponent

5. Attacker Retreats:

This is essentially the same as Defender Retreats" except of course that all attackers must retreat. The program now returns to line 1600 to look for further combat. Exit back to the main routine via the return in line

The following is a list of the variables used in the program

4002 PAINTAGE AND THE STATE OF THE STATE OF

VIC 20 SOFTWARE

QUALITY SOFTWARE FOR THE 3.5 VIC 20 COMPUTER

DEFLEX

Fast-moving action and spectacular colour and sound effects add to the excitement of this original game. Deflect the rapidly moving ball to hit stationary or moving targets. Records top ten high scores. 20 skill levels.

ROX

At last an original and compulsive space game. Defend your moon base from the deadly ROX from space. Increasing levels of difficulty and superb visual and sound effects make this the greatest new arcade-type game since Space Invaders.

DEFLEX and ROX on same cassette £4.95

TEN SUPERB 3.5 PROGRAMS — ALL TEN FOR £6.95

GEM+ Create and store your own custom character sets

TANX Tank battle for 2 players.

MUSIC
Encode tunes in three-part harmony up to 130 notes long on
3.5k machine.

SPACE ZAP
Destroy alien spacecraft attacking your space station

BREAKOUT Superb sound and colour effects.

HI-RES
Sketch on a 128 x 128 pad using keyboard or joystick
SPIRO

Create spirograph-type patterns in hi-res.
VIC TRICKS

Program demonstrates the special uses of VIC chip registers.

MASTERMIND

Uses colour and sound to the full.

WORD GAMES
Unusual and challenging game for 2 or more players

dK'tronics

graphics. 198 (c.) ±12.39 (e.) ±12.39 (e.)

SANTA CRUZ/TRICKY TUTORIALS

DISPLAY LISTS: Teaches you how to after the screen format of small and large test on the screen together and high and low res graphics. 16K (CI 58.56 MORZONTAL METERICAL SCRIDUR): Enables graphics or heat to be moved up, down or sidwways. You could move only the text on the bottom half of the screen or resets a map and scroll smoothly over it.

or create a map and scroll smoothly over it. 1988 (C) \$3.99

PAGE FLIPPING: Learn how to have the computer draw the next page you want to see while you are still looking at the previous page then flip to it instantly. A very useful program.

Calisto Computers Ltd.

BADES OF ANIMATION. This program shows you have to assingte simple shapes swith bounds using hirds. 8 Policy commands and also has a risc PlayerMissile graphics game you can play with. PLAYER/MISSIGE CREATIONS. This program shows you have to create a simple shape called a player, then takes you strough over 20 examples to create a complete business application and a small game.

SOUND: Unless you have spent many hours experimenting with the four voice channels of the Atari, you will learn a lot from this one. With many examples of special sound effects.

MINI WORD PROCESSOR: Requires printer and 32K of memory. Suitable for simple editing of text, and storage of text up to 5 pages of length or either disc or tape. Great value.

KIDS PROGRAM 1: Three programs on one tape. Maths: test your child's maths skills; Dialogue: talk to your computer; Lost Treasure: search over a small island looking for a treasure.

16K (C) £9.95

BOB'S BUSINESS: Programs on this tape include Amortisation Table, Monthly mortigage payment, Depreciation schedule, Savings and Loan Averages, Square Feet and Yards, Psycheck Calculation, Interest on Investment, Montage Companion, Projects Expenses, Monthly Sar Graphics, DecimalNes Conversions: US Mont Commentions, Charlishood Balance.

XXXX 2. These more programs for your children. Spelling Bee, input and test those monthly vertic, jumbiled up letters give a lot of fur. Touch, follow the computers instructions and stop yourself laughing.

THE GRAPHOR MACRIER: Type in simple commands like line, bob, circle, polygon, fill and save screen to get hires pictures, you can save and retrieve in seconds. Several demon as included in this great program.

48 (6) (13.56

seconds. Several demos are included in this great program. 46K (D) £13.59

PLAYER PIANO: Turns your keyboard into a mini piano. Create your own songs, save on cassettle or disc, up to 400 notes in memory. 24K (C) £9.96

Atari 400 from £2.99 Atari 800 from £5.99 Atari 410 £50 16K Ram from £40 32K Ram P.O.A

COMPUTER & VIDEO GAMES 45

ENGINEER

Have you ever had the urge to build a bridge but just couldn't find the time or place to construct one? If so, then this simulation is for you.

The object of this game is to successfully build a bridge from the ground up. You have been hired by the Sam Francisco Public Works Commission to rebuild the famous Golden Gate which was recently destroyed by a powerful invasion from space. You must connect the two blocks at the top of the screen. You do so by placing beams from the bottom until you can support the connecting beams across the top.

There are only of sew rules, on you are your own boss. You must have the right end of the beams supported by either another beam of the rocky cliffs on the side. The only other item to be aware of in the ever-present inspector, who will walk up and down during construction. All he cake of you is that you lay beams below his feet only—so you can't drop one on his head.

The game itself is simple to play and win, so the challenge is in completing the entire work in as few days as possible. To play, all you need is an 8K Atari with one joystick, which goes into the

leftmost slot.

DA — days of construction so far.

X, Y — location of inspector.
M, N — location of pointer on screen.

CONDITION RED! "Commander... the space shuttle's fuel tank is leaking We have to make a forced landing on the lunar surface — and soon. The fuel is fast running out! What shall I tell the passengers? Commander ..." You have the lives of the shuttle's passengers and crew in your hands as your craft plummets towards the moonscape, hundreds of barren lunar miles

Unlike most lunar lander games Moon-Lander provides lateral thrust controls which accierate the craft left and right rather than just moving it. Facilities are also provided for changing your fuel capacity, vertical thrust, lateral thrust, and the strength of gravity.

You have four instrument readings and a video display of your landing. The instruments consist of two speed indicators — one vertical and one horizontal - a fuel gauge, and last, but not least, an altimeter Using these instruments you must land, with a vertical velocity of 10

metres second or less, on a reasonably flat piece of ground.

The program is written in Acorn Atom Basic for a machine with a fully

expanded lower text space. For those with other machines who may want to convert the program to run on their systems the shortened form of the statements is usually the first one or two letters of the relevent stateme followed by a dot. Variables preceded by a % symbol are, unlike the convention used by most other Basics, real variables, and those without the % are integer variables. All GOTOs and GOSUBs in the program use tabels for speed — le G. A. program control to the section beginning with the label A - in the given program this would be line 1090

Returning to the program itself line 30 calls the instruction printing subroutine which, having printed the instructions, watts for the shift key to be pressed before returning control to the main program. Lines 40 to 140 then input fuel capacity, gravity, etc and check for illegal inputs. The following lines, up to line 320 set the screen to graphics mode nought and draw the moonscape — with two randomly positioned, random

height peeks.

Line 340 prints out the instrumentation headings (P.\$30 homes the cursor). Lines 350 and 360 turn the moonscape grey, and lines 370 and 400 place 80 stars (white pixels) in random formation on the screen. The next two lines 430 the main program loop starts. Lines 440 to 470 mirror the effect of gravity and input the controls — the instrument readings are then updated by lines 480 to 550. Control is then transferfed to the routine with label 'A' which starts at line 1090. This routine works out the new position of the lander and replots it accordingly.

The next three lines in the main loop (570 to 590) check to see if the craft has landed or gone off-screen and, depending on the results of these tests.

either loop back to line 430 or continue to line 600.

Lines 800 to 700 then determine whether or not the ground on which you touched down was acceptably flat. Lines 710 to 1080 output the evaluation of your piloting abilities.

Deep beneath the waves lurks a horribly beweaponed submarine waiting for its prey — a convoy of cargo ships protected by launches, fast patrol boats and aircraft carriers.

The aim is score the highest number of points in one minute. You have an unlimited supply of missiles which are fired by pressing 0. If 0 is pressed again before the first missile has reached its target it will self-destruct and a second will fire from the sub.

Bonus points are awarded for accuracy. The closer to the centre of the ship your missile lands the more points you score. I and P are used to move the sub left and right.

The highest score for this program so far is 1100. Can you beat it?

Notes on the program: S\$=submarine: T\${cargo ship, E=2; C\$=carrier,

Notes on the program: S\$=submarine; T\${cargo ship, E=2; C\$=carrier. E-1; LA\$=launch, E=3; SP\$=speedboat, E=4.

B: random number -1 or I, which decides which direction TS AND CS move. C. height of the missile of It is used to stop the missile going over the scenery. D: random number, 1, 2 or 3, which decides the height of the ships up the screen and volume of sounds. E changes for each ship and is used for provides probability of ship appearing. It gives the horizontal position of the missiles. It used as a delay to recete radar sound.

2130 PRINT"M 'I' - MOVES LEFT" 2140 PRINT"M 'P' - MOVES RIGHT" 2150 PRINT"M '0' - FIRES A MISSILE" 2160 PRINT" PRESS A KEY TO START." Lady Luck presides over the popular dice game of Yahtzee but you make the calls, and the computer makes a worthy oppo-

For those not familiar with Yahtzee, it involves five dice but a good deal of skill and judgement as well as a fair slice of

lnck. There is a poker type scorecard for each player with a list of things to be achieved and scored. The player throws the five dice and decides which section of the scoresheet that throw

is dedicated to The scoresheet is made up of: ones, twos, threes, fours, fives, sixes, high run (2, 3, 4, 5, 6) and low run, four of a kind, three of a kind, two pair, a full house, a pair, a Yahtzee and a chance. Bonuses are scored for making a Yahtzee (five-of-a-kind) and scoring well on the first section: ones-sixes.

Say the player throws 2, 2, 2, 6, 5. He then has the choice of trying for a three of a kind, threes on the lefthand side of the scoreboard or keeping the three twos and re-rolling the other two dice to achieve a four of a kind or a Yahtzee. Three throws is the limit before he tills in his

scorecard. If he is not successful in his two further throws he can still go in the first two options, if however, he fails to score any of the combinations, he scores o in one of the boxes.

The game involves a fair amount of strategy and the computer plays a fair game. But there is plenty of scope for improvement and all that is needed is to add to the data statements in lines 30000 through to 38140, or try adding further options to lines 7310;

7365; 7305; 7414. Yahtzee is written for the Video Genie but it will work on a TRS-80 and, as there are no PEEK or POKE statements, the reader should have little difficulty in adapting the graphic part to

other machines. Arrays: x(15) is used to swop data when turns are transferred from computer to human or vice versa.

H(15) Stores human scorecard CP(15) Stores computer scorecard

t(5) Is for storing throw of dice. z(3) Is used for storing 3 new throws by computer.

MANIPULATING Your Data

An important part of designing a program is deciding exactly how data is to be represented and organised.

The same data may be represented and organised in many different ways, and a particular form will allow some operations to be performed more easily than others.

For example, arithmetic of any kind is very difficult with Roman numerals, but much easier with modern positional notation, and in positional notation the choice of base makes a difference to some operations.

The simplest and best known example is the way in which we can multiply or divide by 10 in base 10 by shifting the digits left or right relative to the decimal point, while in base 2 the same operations give a multiplication or division by 2.

A less familiar example is found in tests for divisibility. Some commonly used tests are that a number is divisible by 2 if its last digit is divisible by 2. divisible by 3 if the sum of its digits is divisible by 3, and divisible by 9 if the sum of its digits is divisible by 9. However, these tests rely on the number being written in base 10 and will not necessarily work if the number is written in any other base; for example 9 in base 3 is 100 and none of the tests works in this case

Character sets in computers vary in the number of characters available, the graphics characters included, and the internal code used to represent the characters.

For many purposes it is not necessary for the programmer to know the internal code since high-level programming languages usually provide functions for converting from code to character and vice versa.

In Basic the commonly used

functions are ASC ("x") or CODE ("x") which gives the code for the character x, and CHR\$(N) which gives the character corresponding to the code number N.

In some machines the same code gives different results according to how it is used; for example, on the PET PRINT CHHS (N) and POKE S. N where S is a location on the screen, do not generally produce the same character.

In programming it is always best to use methods that do not depend on special features of the machine, as this will make your programs easily transportable.

The following program for converting numbers to hexa-decimal (base 16) demonstrates a method that is often used for calculating the character code corresponding to the digits of a hexadecimal number.

100 PRINT "DECIMAL NUMBER"; 110 INPUT N

200 LET N1 = N 210 LET H\$ ="" 220 LET Q = INT (N1/16)

230 LET D = N1 — 16 * Q 240 LET A = D + 48

250 IF A > 57 THEN LET A = A +

260 LET H\$ = CHR\$ (A) + H\$ 270 IF N1 < 16 THEN GOTO 300 280 LET N1 = Q

290 GOTO 220 300 PRINT N: "IN DECIMAL IS": HS: "IN HEX"

310 GOTO 100

Lines 220 and 230 give D equal to the remainder after dividing N1 by 16; which is the value of the rightmost digit in the hexadecimal form. Lines 240 and 250 give A equal to the ASCII code for D.

In the ASCII code the digits 0 to 9 are coded as the numbers 48 to 57, and the letters A to Z are coded as 68 to 90; thus adding 48 to D gives the correct ASCII code if 0 < -D < = 5, but if 10 < -D < = 15 it is necessary to add another 7 to get the ASCII code for a letter from A to F.

This method is machine-dependent, as it makes use of specific ASCII codes, and while it will work on most home computers it will not work on all of them. The Sinchier machines, for example, do not use the ASCII codes. However, it is easy to convert the program so that it does not depend on the particular codes. However, it is easy to convert the program so that it can be considered to the particular codes. However, it is easy to convert the program so that it can be considered to the code of t

DEF"
240 LET H\$ = MID\$ (C\$, D+1, 1)

and delete lines 250 and 260 the program will work on any machine with Microsoft Basic regardless of the character code used. It still will not work on a Sincleir ZNB as Sincleir BASIC does not have the MIDS function. However, in Sincleir Basic line 240 can be replaced by 240 LET HS = CS(D+1) + HS

DEFINING CODES . . .

What we are doing in the second method is, in effect, defining our own code so that the code used in the machine is irrelevant to the working of the program.

In most applications we have to define our own representation for the data because the machine does not provide exactly what we want.

As an example, consider the problems of representing playing cards in a program. Some home computers have graph symbols for the suits but others do not in the latter case we can

use the letters C,D,H,S, as easily remembered abbreviations.

A card-playing program will have to accept cards input from the keyboard, perform various operations on the cards, and display cards on the screen, and these three phases may require entirely different representations of the cards and hence require conversion between the different representations.

For example a card may be typed in as CA, held as the number 14 for calculations concerning the play, and displayed on the screen as a picture of the

Ace of Clubs.

The programmer will have little choice in the input and output forms as these must be easily recognised by the user, but the internal form may be chosen in many ways differing in both rep-

resentation and organisation.

The choice of an internal form suitable for the operations that must be carried out can make a great difference to the ease or difficulty with which the program is designed and coded.

STORING CARDS . . .

One method of storing cards which simplifies many operations is to use a string array in which the array elements are the input forms and the array indices are used either as numeric codes for the cards or as pointers to another array giving numeric codes.

For example, we could define a string array P\$(52) with P\$(1)="CA", P\$(2)="C2", . . . ,

P\$(13)="CK",P\$(2)="DA", . . ., P\$(52)="SK".

We can then use a simple routine to check that what the player has typed in is actually a valid card:

100 INPUT C\$ 110 LET I = 1

200 . . .

110 LE11 = 1 120 IF C\$ = P\$(I) THEN GOTO 200

130 LET I = I + 1 140 IF I < 53 THEN GOTO 120 150 PRINT "NOT A VALID CARD, TRY AGAIN" 160 GOTO 100 If the program began by dealing the player's hand we must also check that the card he typed in was included in the hand he was dealt.

On exiting the above routine I points to the array element corresponding to the card typed in, which with P\$ as defined means that the cards are coded as CA = 1, C2 = 2, etc.

This simple method of obtaining a numeric code may be all that is needed for some purposes. For example, to sort a hand we can simply sort the codes into ascending order and when we convert the codes to strings by looking up the P\$ array we will find all cards of the same suit together and in order

from Ace low to King high.
Other orders can be catered for by defining P\$ differently. If we want the cards sorted into suits and in order from two low to Ace high we define P\$(1)="C2", P\$(2)="C3", P\$(12)="CK".

P\$(13)="CA", P\$(14)="D2", . . . ; if

GAMES YOU CAN PLAY
If we look at a few games we can see some of the necessary operations and special cases the spot that affect the suitable representation.

cribbage

Points are scored for cards in sequence, with 10, I,Q,K entering into sequences in that order, so it would appear that these cards can be given a value of 10, 11, 12, 13 respectively. However, points are also scored for combinations of cards totalling 15 and in this case 10, I, Q and K all count as 10. Thus we need a count as 10. Thus we need to control to the count of the count

POKER

A run of five cards may have on Ace as the high card or the low card, but cannot have an Ace in the middle. Thus, A. 2. 3, 4. 5 and 10, 1. Q. K. A count as runs, but J. Q. K. A. 2 does not. However, elsewhere in the game Ace is always high. Probably the easiest way of decling with this amountly is to include a special test for runs of the type A. 2, 3, 4.

BLACK JACK

The aim of the game is to get

want the hand sorted with cards of the same rank together regardless of suit we define P\$(1)="CA", P\$(2)="DA", P\$(3)="HA", P\$(4)="SA", P\$(5)="CZ".etc.

Pa(3)= C2, etc.

In many card games we will need to separate the suit and value of a card, and possibly perform some manipulations with the value.

If we store the cards in an array such as P\$ the suit can be found easily as S\$ = LEFT\$ (P\$(I), I) and a numeric code can be devised from this if neces-

sary.

It is usually more complicated to deal with the rank or value of the cards; it is rare to find a card game that requires any operation on the suits other than ordering or testing for equality, and sometimes for colour. However, different card games require a wide range of operations to be carried out on the ranks or val-

ues of the cards and there are frequently special cases.

the highest total without going over 21, where 2 to 10 count as the spot value, J. Q. K count 10, and A may count as either 1 or 11 as the player wishes. In evaluating a hand it is necessary to

that may be assigned to an Ace. BRIDGE

In the bidding the suits rank from low to high, Clubs. Diamonds, Hearts, Spades, No Trumps. In the play, however, there may be a trump suit, in which case a card of the trump suit ranks above cards of any other suit whenever it is played in a trick. To allow for this we need a valuation of the cast that may change from hand to hand.

allow for the two different values

Where we have a straightforward ordering of the cards in a suit, whether from Ace low to King high as in Cribbage, or from two low to Ace high as in Bridge, it is possible to calculate the rank of a card from its position in the P\$ array.

For example, using the third definition of P\$ above, LET R = INT((1+3)/4) would give R the value 1 when I was 1, 2, 3 or 4 (i.e., for an Ace), 2 when I was 5, 6, 7 or 8 (i.e., a Deuce), etc.

FULLER FD SYSTEM FOR ZX80/81

THE MOST VERSATILE SYSTEM FOR EXPANDING YOUR 7X

STANDARD KEYROARD AND CASE

This splendid keyboard and case houses your ZX81 printed circuit board, which is simply screwed into place, the keyboard plugs into the ZX. You can now enter data with ease. The 40 key switch board is a custom unit not made up out of other manufacturers parts. The keytops are our own design and have the ZX Qwerty and functions foil printed onto them. Access to the user port, TV, MIC, and ear sockets are as per the ZX case.

Built keyboard and case £36.70 or £30.70 as a kit plus £2.10 postage and nacking.

EXTENDED KEYBOARD AND CASE

Keyboard Only Available! Built £24.95 Kit £18.95 (+P.P. 80p)

The case is designed to house not only the keyboard and ZX but also our motherboard, power supply, RAM cards and two other boards, not necessarily of our manufacture. The injection moulded case measures 200 mm x 350 mm x 60 mm and houses a 42 keyswitch board, the extra keys can be assigned to other functions. The case is supplied with a "Power On" LED.

Built keyboard and case £39.95 or kit £33.95 plus £2.50 nostage and packing. Motherboards £15.95 plus 80p postage and packing. 16k RAM board £35.95. 64k RAM board £79.95.

URALL

me, touch me, hear me! . . . demand loud, flashy machines STYLE which have quietly found their way back to their tradi-tional haunts in pubs and arcades. Pinball is back —

See me.

The video boom almost wiped out this denizen of the musement palaces — but kers were working out a y to beat Space Invaders I video machines at their

own games.

Aided by the microproces Added by the microproces-sor, a new generation of "pins" were born. And now you'll believe that pinball can talk! They challenge, encour-age and even insult the player using a wide vocabulary of electronic utterances.

Retween the Xenon Between the Aenon machines' sensuous tones that invite you to, "Try me again", to the Medusa's fierce "Chal-lenge the Medusa!" there are a variety of words and phrases the dedicated pinball player can wring from his favourite

But how did pinball bo back? Computer and Video Games visited the Wembley beadquarters of Bally Conti-

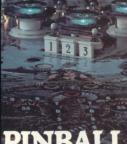

ntal - one of the big three manufacturers and dis-ors. There we talked to vid Adams, managing direc-r of Bally's operation in this

"The video boom gave pin-all a shot in the arm," Adams a shot in the arm, d us. "It encouraged the olution of the machines.

"I've been in the business 20 years and it's incredible the way they have developed. The new games are treme ality-wise and player-wise. "Three years back, arcade

ers were taking out th "Pir have knocks. It's seen it all

PINBALL

them with video games. Now there's a shift back to pinball. One of the first machines Bally produced in their fight against the video games was cheekily called Space Invader and it produced sounds just like the video game of the same

"Kids get to a certain level on a video machine. Say the score 10,000 points every the d they keep on scor and they keep on scoring 10,000 points. They get so good that they become bored with it. "With pinball, no two games are the same. They could score 10,000 one game and an embarrassingly low score the next time they play. They keep oming back to play again to eat the machine."

He adds that pinball de-

gners now concentrate o uilding more features interactions to test the skills of the es to test the skills of the

Features like captive balls aly released when targets are hit in the correct sequence, multi-level playfields and skill shots which send the players'

There are machines which send several balls rocketing down the playfield at the

down the playment at the player during a game — just to keep him on his toes. With the voice, revamped sounds and lights and the skill features these new pinball machines are in good shape to give the video games tough competition in the arcades,

before. There's always going to be pinball."

TARGETS The neon-bright TO TEST pinball of surises in sto for the ur ated who step

up to sample their delights.

Experienced players like to see ingenuity used in the design of the machines. Multiball fea-tures are a big favourite — but tests of skill, in whatever form they appear on the playfield, are essential if a pinball is are esse ng to be a win

Players also like to get clear instructions on the machines — about target sequences or bonus features and how they can get them. On some

machines you can simply bash the ball around the playfield and not know why lights are flashing or if you've collected bonus points.

Players face a real challeng if they step up to one of Bally latest pinball creations calle Centaur. This sinister looking machine — it is resplendent in horror show black and white artwork — is packed with skill

Unique to the machine is a eature called equitable multiball. What that means is that each player has to build up his own store of balls for multiball lay, getting no advantage rom the skills of a previous

The play centres around releasing captive balls. This is achieved by hitting a config-uration of targets with O.R.B.S. lettering.

O.R.B.S. lettering.

Hit in sequence these release a captive ball. Hit out of sequence they store up a number of possible captive multiballs in the machines memory — to a maximum of four.

These can be release by shooting the right passageway

when it is lit. The Centaur also has one other disconcerting feature — it plays itself. When no-one has

roached its coin-si hat it regards as an that it regards as an infriendly length of time it lasts out five balls and sends them rocketing around its own layfield — just to get a bit of

attention.

If this singular machine's flipper buttons are pressed when the game is over it speaks out — listing its skill features to anyone who will listen while colour coded lights flash in

Elektra is another Bal machine soon to be seen in the arcades. This has a novel three level playfield — with a mini-

field at its heart. This can only be reached by collecting

er levels upper levels.

It has two captive balls — on the top and second levels — which are released after targets are hit in the correct sequence. Once on the mini-field players

Once on the mini-field players can earn up to 195 thousand points on its bonus features. Multiple flippers feature on Bally's Medusa game which has a two-level playfield. It also has a useful shield post located has a useful shield post located between the lower flippers which — if you've built up enough bonus points — enables you to save a doomed ball with a touch of a button. It also laughs at you when you lose a ball — which can be very

VALUES

There are many occasions when it is desirable to perform a calculation in a program without immediately printing the result. It may be that the value produced is only an intermediate value in some calculation, or, the value is to be stored for use later in the program - it would be wasteful to perform the calculation more than once.

The LET statement is used to allocate a value to a variable. The general format of the LET statement is

line no.> LET <vari-</pre> able > = <arith. expr. >

The operation of the LET statement can be described as follows: the grithmetic expression on the right of the "=" is evaluated: the resulting value is then assigned to the variable on the left of the "=". Assume that a program has three variables A. B and C. At some point in the execution of the program A has the value 2, B has the value 5 and C has the value 3.5. If the 80 LET S = A + B + C

then after this statement has been executed, the value of variable S will be 10.5 and the values of A, B and C, will be unchanged.

If the computer now encoun-

90 LET A = A + 1 then the following sequence of events occurs:

the computer first looks up the current value of A and finds "2", this value will be copied into the part of the computer that performs arithmetic; it then adds on "1" to get the value "3" for the arithmetic expression. On examination of the variable name on the left of the "=" it stores the value "3" for A - thus

overwriting the old value of A with the new value. The statement:

90 LET A = A + 1 therefore means increment the

value of A by 1. Last month Lagre an example of a program to count the number

of words with four letters that were typed in. In that program, I used a statement similar to the one above to increment the count each time a four-letter word is input.

Another common use of the LET statement to update the value of a variable, is the idea of maintaining a "running total" in a program. I will now look at an example of a program that uses this technique.

A football team wants a program to calculate their average crowd attendance in a season of 40 games. The outline of the program would be: ninning total = 0

repeat 40 times input no. in crowd let running total = running total + no. in crowd

end repeat let average = running total/40 print results

In many versions of Basic, the first line is not essential since all variables are assigned the value "0" initially. When a variable is used as a count or a running total, a vital part of the logic of the program is that the variable should be initialised to "0" - it is a matter of convenience that most versions of Basic automatically perform the initialisation for us. Although the calculation of the average could be included in the Print statement, I shall put it in a separate LET statement so that the Print statement is less cumbersome.

10 REM CALCULATE AVERAGE 20 REM CROWD ATTENDANCE 30 FOR I = 1 TO 40 40 INPUT N

50 LET T = T + N 60 NEXT I

70 LET A = T/40

80 PRINT "AVERAGE CROWD ATTENDANCE =":A 90 END

could be extended. One improvement would be the use of printing messages to tell the user what the format of the data typed in should be. Examples of this were introduced last month. Another improvement would be the inclusion of data checks.

I am sure you are all well aware of how easy it is to make typing mistakes. A great problem in computing is the detection of such errors in the data. Some errors are very difficult to detect - for example, someone might type their age as "22" instead of "33" - however. others are easier to detect - for example, a person typing their age as "322" lies outside the possible range of values.

Let's assume in my previous example that the maximum crowd that the ground could hold is 20,000. Then the value of N should lie in the range 0 to 20,000. The section inside the FOR loop could be extended to

40 INPUT N 44 IF N < 0 THEN 54 IF N>20000 THEN 54 50 LET T = T + N

52 GOTO 60 54 PRINT "ERROR - PLEASE 56 GOTO 40

A further check is that N should be an integer value. This can be done using the function INT - INT(N) returns the integer part of N.

If N has an integer value, then INT(N) will equal N. I can therefore introduce one more state-

ment in the loop: 42 IF N<>INT(N) THEN 54

For reasons of brevity. I am unable to include all these data checks in my sample programs.

I have already used the functions INT and RND in the series. A number of commonly used functions are available in Basic as standard functions. This saves the programmer having to write his own programs (or parts of programs) to evaluate such functions. The standard functions provided will often depend upon the power of the version of

In the table. I have listed the most common standard functions and briefly described their use As many of them are mathematical. I can only suggest that you ignore those you

don't understand! Wherever the function operates on a value — enclosed in brackets after the function name - that value may be given as a ssion. For example:

INT(6 = RND+1)LEN("CAT")

Note that brackets are not required after the function name on the Sinclair ZX81

> Example INT(3.2) = 3

LE OF STANDARD FUNCT

Function	Description
INT	integer part
ABS	absolute value
SGN	the sign of a number
SQR	square root
LOG	natural logarithm
EXP	exponential function
SIN	sine (radians)
cos	cosine (radians)
ATN	arctangent
IFN	length of string

pseudorandom number between 0 and 1

ABS(-) = 2SGN(-2) = -1SQR(4) = 2LOG(2) = 0.69315EXP(1) = 2.71828SIN(0.5) = 0.47943COS(0.5) = 0.87758ATN(1) = 0.78540

LEN("CAT") = 3RND = 0.217873

However, you should include them in any programs you write. Don't assume that someone running your program won't make mistakes or deliberately try to sabotage your program!

The IF statement tests whether a specified condition is true. So far, the conditions have been simple in that they only involved one test. For example:

COMPLEX

or N <>INT(N)

a specified range. In my example. I had an error condition if either N was less than 0 or N was greater than 200000. This required two IF statements lines 44 and 48 of my program. It is possible to combine these into one IF statement:

RND

45 IF N < 0 OR N > 20000 THEN 54

Thus, simple conditions can be combined using "OR" to form complex conditions. If any of the simple conditions are true, then the whole complex condition will be true and a jump will be made to the given statement. It is also possible to check that

a number of conditions are all true by combining them with 'AND' in a single IF statement.

115 IF NS = "SMITH" AND A = 20 THEN 200

could be used to identify persons with the name SMITH and age

NEXT ISSUE

When moving to a new computer system, or converting programs from one system to another, it is useful to have a summary of the main features of the version of Basic used.

In each future issue, I will provide a reference table for one particular system. The table will outline the main differences between standard Basic and the version used on that system. It is envisaged that most of the popular systems will be included. Next month, I will start by looking at the Sinclair ZX81

It is possible to have more complex conditions that involve a combination of simple conditions. This is particularly useful when testing that a value lies in

Adventure

TO SCROLL OR NOT SCROLL

What is the best way to use the screen to display your adventure? Sooner or later in writing an adventure you must decide whether to use the conversational scrolling technique or a whole screen approach.

The disadvantage of scrolling becomes obvious when the player has to recall details of his location, which can soon become tiresome. As soon as the machine reply is decided it may be screened with a PRINT statement, and the program looped back to the INPUT line.

However, I prefer to clear the screen and redisplay the location details together with the machine's reply. In my opinion this gives a more polished appearance to the game, the player having more relevant information displayed at any creatives.

ne time.
It is also useful to display the

player's last command — if the computer's reply is a bit mystifying he can check what it was responding to, a typing error

maybe? If the screen is cleared when INPUT is received, and PRINT statements executed as each piece of information to be displayed is available, the presentation will look very jerky, leaving the player in a state of nerves waiting for the whole thing to crash! This can be avoided if all the replies are assigned to variables and only when all are set is the screen cleared. All these variables can now be screened at once, providing a smooth change and giving the illusion of speed, since the

screen is never really blank.
Using Q1\$ for the reply, the
lines 3000 to 3050 described last
month will look like:
3030 LET Q1\$ = 'IMPOSSIBLE':

GOTO 100

Between lines 100 and 150 we

will insert some IF statements later. Using OT\$ and OW\$ for the objects, display coding will now look like this: EM start of main loop ET OT\$ = "": LET OW\$ ": LET OS\$ = "I CAN SEE! 'OR I = 0 TO 3 : IF P (I) = I

IF LEN(OS\$) + LEN(OW\$) (no of characters per line of the screen) THEN LET OS\$

the screen) THEN LET OSS OSS+OWS ELSE IF LEN(OTS + LEN(OWS) < (no. of chars THEN LET OTS = OTS OWS

REM to

wrapping round

Name: Mr/Mrs/Miss Address: Sinclair ZX81 Personal Comp the heart of a system that grows with you.

1980 saw a genuine breakthrough the Sinclair ZX80, world's first complete personal computer for under £100 Not surprisingly, over 50,000 were sold.

In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand - over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day

Lower price: higher capability With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working

capability than the ZX80. It uses the same micro-processor. but incorporates a new, more powerful 8K BASIC ROM - the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements - the facility to load and save named programs on cassette, for example, and to drive the new ZX Printer.

BASIC manual

£49.95 Higher specification, lower price

Kit:

how's it done? Quite simply, by design. The ZX80 reduced the chips in a working

computer from 40 or so, to 21. The 7X81 reduces the 21 to 4! The secret lies in a totally new master chip. Designed by Sinclair

and custom-built in Britain, this unique chip replaces 18 chips from the 7X80!

New, improved specification Z80A micro-processor – new

faster version of the famous Z80 chip, widely recognised as the best ever made. Unique 'one-touch' key word

- entry: the 7X81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.
- Unique syntax-check and report codes identify programming errors immediately
- Full range of mathematical and scientific functions accurate to eight
- decimal places. Graph-drawing and animated-
- display facilities. Multi-dimensional string and numerical arrays
- Up to 26 FOR/NEXT loops
- Randomise function useful for games as well as serious applications.
- Cassette LOAD and SAVE with named programs.
- 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.
- Able to drive the new Sinclair Advanced 4-chip design: micro-

processor, ROM, RAM, plus master chip - unique, custom-built chip replacing 18 ZX80 chips.

Built: £69.95

Kit or built - it's up to you!

You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus of course the other discrete components) - a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor - 600 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder

Designed exclusively for use with

the 7X81 (and ZX80 with 8K BASIC

ROM), the printer offers full alpha-

numerics and highly sophisticated

E SOFTWARE SOFTWARE SOFTWARE SOFTWARE SO

AROUND IN ANCIENT "BRIGHTON"

England has always been a difficult country to conquer but Julius Caesar was one of the few foreign leaders to do so

During his governorship of Gaul he invaded Britain with 600 transports carry ing an army of five legions and over 1,000 cavairy. Sharpsoft of London has brought out a game which makes the player reenact the strategy he employed to wage war against Britain.

If Sharpsoft had spelt the name of the name correctly it would have added more credence to the "Caesar's Invasion of Britain" which ultimately turned out to be worth sticking with.

'Caesar's Invasion of Brighton" (he didn't aim high to start with) is an adventure game in which your job is to capture the stronghold of Cassivellaunus, a Celtic leader, and return safely to your ships.

CAFSAR'S INVASION OF BRITAIN recruiting additional cohorts and cavalry

and, more importantly, to hire scouts Scouts are vital to your operation hecause without them there is no way of discovering the lay of the land and the enemy's whereabouts. That's where I

made my first mistake You also have a money, denarii, in your nurse which comes in handy for bribing

potentially harmful tribes. Food is also a vital necessity, without grain your troops will eventually starve unless you succeed in

finding or stealing some bags. While battling out the invasion in Britain

you also have to deal with Roman elections, sending agents armed with money to swing power your way. The game was repetitive when I played

it. I seemed to wander around the countryside being attacked by various barharians Insing all my denarii and finally losing the vital battle

It costs P5.85 from Sharpsoft and rups on

a 48K Sharp.

GALACTIC ATTACK

This battle for control of a solar system relies on more than just reactions and a fast finger on the fire button.

The object of this dull but very of Torps, and other vital items. addictive game is to colonize a solar system or free it from the Kzintis-depending on your point of view. It is a difficult game to master and requires strategic thinking as well as tactical manoeuvres and rapid reflexes.

Control of your ship is via the keyboard, and requires quick thinking when under attack from Kzinti ships. You also control your Torps and Phasers from the

battle. After that I won about 70% of the time, but I have not

vet conquered the whole solar system The display is nice, showing

each planet in a distinctive way and the scale has been well chosen to allow you to get lost, but not too often. Another nice feature is the ability to specify various parameters such as number of Kzinti ships in each attack, speed and effectiveness

Beaming armies up and down between ship and planet is an added complication which I enjoyed but it is tedious in the early stages.

Recommended to all committed space war enthusiasts with time to spare!

Galactic Attack runs on a 48K Apple under DOS 3.3 or Pascal. costs £17.55 and is available from Woodland Software.

YOUR MIND THRESHOLD

If Galaxians and Space Invaders caused you headaches. Threshold will give you migraine. It is one of the most compulsive games I have come across

since green meanies and winged creatures first flew onto my Each time you successfully

destroy one wave of invaders a different breed of creature attacks

You get five ships fully equip ped with Delta class lasers to blast the aliens, but you must take care not to run out of fuel by firing too many missiles. Also at your disposal is a hyper

warp drive which slows down the alien action for a few seconds. But because of the nower consumed during its use you can only activate it once

The first onslaught of aliens

are bat like creatures. These are followed by Galaxian types which plummet in a kamikaze style dive

towards your ship The third type of alien looks more like a member of the fish

family and swims across the screen above your ship. Your five ships are lined up on

the right hand side of the screen and when play begins the engines start to rev up.

Sheer compulsion apart, the game boasts imaginative graphics and sound effects.

Because of the proliferation of aliens, points are quite easy to score and you also get bonus ships after notching up 50,000

points, 100,000 points. Well worth spending the £19.95 on Threshold for your Apple II (48K), Richmond based S.B.D. Software is the supplier.

FTWARE SOFTWARE SOFTWARE SOFTWARE SOFTW

TAKÉ A SPIN DOWN THE ALLEY

TENPIN

Tennin howling must be one of the last sports which would seem suitable for computerisa-It says a lot for computer

games designers that they have come up with a version which recreates the need for a good eye and judgement, and still manages to be entertaining. The screen shows the tenpin

lane from the viewpoint of the bowler, with the machinery, and the 10 pins that are to be knocked over in the distance. The rules of tenpin bowling

are simple, but for those not familiar with them, adequate instructions are included with the program.

A hall is rolled down an alley with the aid of the computer's two arrow keys and the space bar, Markings, a third of the way down the alley, assist in aiming the ball, and a spin can be given to the ball any time up to it reaching these markings. A game consists of 10 frames per person, you are allowed up to two balls per frame to knock down the 10 pins. The computer keeps your score and displays this, together with any "strikes" or "spares" (knocking over all 10 pins with one or two balls respectively) at the end of the lane, to the left of the pins. To the right of the pins is shown a plan view of the pins remaining standing.

At the end of the game the scores for each player is shown and you have the option of taking part in another game.

There can be between 1 and 4 players and the game has the added effect of sound available through an amplifier.

As usual the Tandy graphics are a limiting factor with this simulation though not as seriously in this game as in others, and should not spoil the enjoyment. A more serious problem is the fact that the ordinary user would find it difficult to take a

backup copy of the program. praised in supporting his soft- the graphics make Tyran-

a copy be spoiled, a new one would be provided, but it would have been nice to have the facility (such as there is on the original adventure game) to make one

Molimerx for the Tandy TRS-80, getting used to. Models I and III and Video Genie,

IAZING JOURNEY

Wandering around the fairground sideshows. I heard a busker enticing the crowd to roll-up and see the prehistoric monster I paid up and entered the tent,

only to be enveloped in a grey mist which transported me back into the era of that mightiest of beasts, Tyrannosaurus Rex. Exploring tentatively, I stop-

ped at an intersection and looked around me. Then came the sound of approaching footsteps. I ran. turning this way and that but there, looming above me, was the dreaded monster. The huge jaws opened to reveal his great teeth I could just make out something inside, I started to read: "You have been posthumously awarded 130 points and sentenced to roam the maze forever. If you wish to appeal, press 'stop' else press 'cont'." I

pressed cont ... I might get out this time 3D Monster Maze, is the best game I have seen for the Sinclair

7X81 The grey and black walls of the Distributor Molimerx is to be maze provide the 3D effect and

3D MONSTER MAZE nosaurus Rex look suitably frigh-

tening as it paces toward you. The maze corridors are constantly changing as you press the 5, 7 or 8 keys to walk forward or turn the corners. There is a way out of the maze but I have only managed to find it twice. If you do manage to exit then your score is increased accordingly. It would be nice to have a high score facility included in the rooram, though,

The play can be speeded up or slowed down if you alter the listing slightly. Instructions on how to do this are included in the notes supplied with the cassette. I have found myself wandering

around the maze with the monster lying in wait, somewhere and not wanting to come out. It does give you a chance to find the exit. but it does take away some of the fun. This did not happen very often though. This program then can be highly recommended and is available for a 16K ZX81 from J. K. Greve Software on its games tape 4 and costs £5.95.

SPARE AND SHOVEL WORK

A monster infested maze is the playground for a defensive The only way to survive in

Alien is to dig holes at strategic spots in the labyrinth. When one of the killer red aliens falls into your trap, you can finish him off by quickly filling it in.

Using the keyboard controls this game is awkward to play joysticks are better. The keys to operate your man are bunched together and to move him up. Tenpin is available from down, left or right needs some

It's impossible to get around models I and II. The tape version this by using two fingers from costs £10.93 and the disc version, each hand to manoeuvre the man about because you must work the 'A' and 'D' keys to activate the digging action with your left

> Points are scored by killing off the aliens, but it varies randomly, sometimes it could be 200, sometimes 300

Alien requires concentration to work out the best places to dig your holes without hemming you in (you could be devoured by a monster). Don't dig holes which are too far apart. If you have a long way to move your man into position by the time you reach the hole containing the floundering monster it will be too late. He only remains vulnerable for a few spronds

IMAGES ON AN APPLE

The high-resolution graphics facilities of the Apple can be used to create and manipulate shapes. This can be done on any microcomputer with highresolution graphics

However, on the Apple, shapes can be represented and stored in a special way so that they may be drawn, erased and transformed more quickly than is possible with other micros. Animation using high-resolution images can be achieved much more realistically and impressively on the Apple than on any other machine.

The way in which images have to be stored when using the Apple appears rather awkward at first, but in fact it is no more difficult than any other way of

representing and storing an image and is soon mastered.

If you want to achieve realistic animation, the effects that the Apple can give are amazing. No system which relies on Basic glone, possessing no comparable special features, gives anywhere near the same speed of execution. Of course, if you are more

interested in creating graphics than in looking at them, you may feel that the Apple makes it too easy by doing all the interesting work, but then you don't have to use the special features. The facilities needed by a programmer to create graphic effects are all available, and the user who wants to do so can create his own graphics system."

The first diagram shows how a shape is represented, so that it can be stored and the special Applesoft commands can then he used to draw and transform it.

The simple bat shape shown in (a) is decomposed into simple vectors which all have the same length but which point north. south, east or west, as in (b). The vectors making up the shape are then

"unwrapped" as in (c) and then are coded. The coding table is

given in (d) and the order in which the vectors are coded and written down is shown in (e). The coded form of the shape is to be stored in eight-bit memory locations. Since the code for each vector has three binary digits, two codes can be stored in each location while the remaining pair of binary digits in each location are both zeros as shown in (e). The resulting table of binary digits is given as (f).

In (a) this table has been translated to hexadecimal and given a header and an end marker, and this is the shape table which represents the bat shape.

The shape table can be loaded into any convenient part of the memory where it will not be over-written, and the address at

which it starts should be placed in the locations with hexadecimal addresses E8 and E9.

When a shape is stored in this way, the following commands can be used.

DRAW 1 AT X. Y draws shape number 1 in the shape table starting at the screen location in column X and row Y. XDRAW 1 AT X. Y similarly erases a shape.

ROT = N causes a shape to be rotated clockwise according to the value of N. N = O gives no rotation, while N = 16 gives a rotation of 90 degrees. In this way. N gives the rotation in units of approximately six degrees. SCALE = M causes scaling. M =

l gives reproduction at the original size; M = 2 doubles the size by doubling the length of each vector in the shape. The maximum value for M is 255 With these commands, anima-

tion can be achieved by repeatedly establishing a position, drawing the shape and then erasing it.

Figure two was produced by the

20 FOR I = 1 TO 3 30 X = 50 * I: Y = 100

40 DRAW I AT X, Y 10 HGR : HCOLOR = 3 20 ROT = 0 : SCALE = 24

30 FOR I = 1 TO 3 40 X = 50 * I : Y = 70 - 15 * I 50 DRAW 1 AT X, Y 60 ROT = 64-3 + I : SCALE =

Together, Mike Chalk and Kansas bring you not just another Arcade game

... an EXPERIENCE!

YOU command the ground-to-air missiles to save the cities from total Alien destruction, progressing to TEN levels of difficulty from not-to-easy to bloody impossible. Multiple displays with five types of Aliens and Satellite Bomber. Each type of Alien attacks on a different

Based on the Arcade game of the same name, this is easily the finest Based on the Arcade game of the same name, this is easily the finest computer game of its kind available today. It demands quick responses and no small amount of skill to overcome the Allens even at the lower levels of play. As the game proceeds, so does the risk of total abiliation, giving at last, a very, very competitive game indeed, and one which will satisfy even the very skilled gamesman.

Very spectacular explosions and sound effects complete the realism. Infinite missile 'sight' control giving movement in every direction.

ONLY from Kansas-£9.50

PLAYING YOUR CARDS RIGHT

The eurocard is a versatile aid to those of you building your own circuits. Unlike other types of matrix board it has been designed especially for the use of chips — but it can also be used for discrete components.

The eurocard comes in various stoss and designs depending on the supplier and the use to which it is to be put. Some types allow for an edge connector and others for rack mounting. The most commonly used by hobbyists just has a double row of holes at each end of the board to allow units to be inserted and wired to.

pinn. In coles, which run on both saide of the bound, are designed to accept chip holders of any standard size. You should be prepared, however, to buy special wire-wrop holders if you are using chips with more than 20 pins, as these will take up all of the solder pads on some of the boords. It is possible, in this case, to solder wires on to the pins of the holder to make connections on the underside of the bound, but this is not reconnections on the underside of the bound, but this is not reconnections.

Most boards have a pair of power lines which are placed conveniently across the top and bottom of the card where the chips are designed to go. By a single short link to the chip to necessity of individual wiring is done away with. Be certain though to make these connections to each chip first as it possible to mistake later wiring for these.

If I am using one of the eurocards for a prototype circuit1 lay it out in an orderly manner with chips evenly spaced across the board making it easy to see where I have already wired connections.

This, however, may not be possible with, say, a memory board which is required to fit into a very restricted space but may, nonetheless, have a large number of chips of various sizes.

For a low density card the

method of wiring can either be by soldering singleor multi-stranded, insulated conductor or by wire-wrapping using the special cable.

In the case of high density boards the most satisfactory means of making connections is to wire-wrop, and sometimes it is the only practicable method. The idea behind this process is that with extended pins on the chip holders the wire can be wound around, either manually

or by the use of a hand tool, to make the connections. It means that the holders, which previously had to be spaced, can now be praced almost on top of each other, thus making the size of card required for the design much smaller, saving space and money.

WRAPPING THINGS UP

There are, as I said, two slightly different methods of wire-warpping. The line and coasing warpping and the line and line

There is a tool specifically designed for this purpose, looking very much like an inverted needle. There are, however, a number of different models so try them before picking one.

Using the wire-wrap tool makes light work of an often difficult job. The battery operated tool cuts the job time in half—if you know how to use it correctly.

The idea is to wrap an insulated wire around the pin at a very high speed but low torque. The square edges of the pin cut through the insulation and a cold forged weld is formed. This is a great improvement on the

soldered contact although the number of times you can remove the join to remake it is limited.

As with the other methods, the first connections made should be the power lines. You can then be sure that it is a chip that has gone down and not just lack of

power.

It is a good idea to loom the power lines, as it is with data or address lines. That is to say, a single is taken from the power point on the card to the first pin, terminated, and then from that pin to the next, and so on and so tooth across the board. Beware of over-loading the conductor if you are using too many chips. or

Designing your own circuits, building them and getting them to work can be very rewarding, but unless you have an idea of how to go about it you can be stumped very easily. By choosing the right method you can cut out a large amount of the hassle involved. Experience will tell you which way is best.

Secretaria de la constitución de

ANNU BOILTINES

Four thieves broke into a bank and stole a number of bags of coins.

They decided to lay low for a while and hide in a wood. In the middle of the night one greedy thief woke up and decided to take his share of the loot.

He divided the bags into four equal piles and found he had one bag left over. So he took this spare bag and one of the piles and hid them away for himself.

Each thief in turn awoke and decided to take his share — not knowing some had already been taken — and each in turn found one spare bag, which they also kept, when dividing into four

In the morning they all awake and divided the loot into four equal piles. This time it went exactly. Nobody commented on the diminished piles because they were all quilty.

They all then went their separate ways picking up their hidden loot on the way. When the last man to awake in the night counted his loot he found he had a multiple of 10 bags.

What was the smallest number of bags they could have stolen?

David Simmons, of Colborne Way, Worcester Park, Surrey and Mrs M. Dickson from Grove Avenue, South Kirkby are this month's champagne winners. Answers to March problems on

A GUIDE TO THE LOW-COST COMPUTERS A,

ATOM Cambridge based Acorn Computers manufactures the Atom machine which has a memory capacity of 2K, but it can be

upgraded to 12K. It must be plugged into a television and is available in either kit form or ready built. As a kit it costs £120 for the 2K computer or £150 for the finished product. For a more powerful system. 12K, the price stands at £220 (in kit) and £250 completed

Acorn also makes the Systems 1 2 and 3 which cost between £89 and £750

APPLE The Apple has a solid software base for both business and entertainment applications. The machine comes with a memory capacity ranging from 8-48K. You can buy joysticks and paddles to plug in for use with computer games. Colour graphics can be used with a colour television.

The 48K machine costs £695 and is obtainable from Apple Computer U.K., formerly Microsense which is based in Hemel Hemostead Hertfordshire

ATARI 400/800 Most of the software for the Atari microcomputers are games or educational, with business applications only recently being introduced.

The basic 400 with 16K RAM costs £340 direct from Atari's UK distributors, via London-based Ingersoll Electronics. The 32K version sells for £395. Peripherals for the machines, like disc drive units and cassette recorders can also be obtained from Ingersall for £325 and £45 respectively. The 800 is expandable to 48K and the 16K machine sells for £645.

BBC MICRO COMPUTER The computer adopted by the BBC to sell in conjunction with its forthcoming series is based on the Acorn Proton. The BBC has developed its own Basic to be used on the machine. Minimum memory is 16K RAM, maximum being 32K. Present plans for the machine are dual purpose, both business and games Ontional extras include investicks paddles, disc drives and a cassette for tape Price is put at £235 for the 16K computer

and £335 for the 32K version.

DAI This is a personal computer made by Data Applications for both business use and home entertainment. The U.K. system (it is made in Belgium) has 48K RAM as well as full colour and sound commands. Data Applications is based in Cirencester, Gloucestershire. The 48K system now costs F595

MICTROTAN 65 Tangerine Computer Systems produce this machine for games and personal use like household accounts It comes in kit form and is expandable from an initial 1K memory up to 48K RAM. The Microtan 65 costs £79.35 for the 1K kit or £90.85 assembled from the Fly based firm

NASCOM There are two Nascoms available at the moment, both can be used for business and games. The Nascom 2 is the more powerful of the two with 8K RAM and with a Basic interpreter

It can be bought in kit form and off the shelf complete. The kit is £125 for 1K RAM and £140 for the finished 1K product £225 will secure an 8K kit. Nascoms are available from Warwick-based Lucas Logic

NEWBRAIN This is a hand-held computer unit which is at the low end of the price bracket. For 2K RAM you pay £159 upwards and it is expandable to 20K of memory. Hobbvists often opt for this machine because of its low cost and it is used for general business and for playing games. An expansion unit is available which supports floppy disc drives, a printer and a visual display unit. It is available from the Grundy

OHIO SCIENTIFIC Ohio Scientific (OSI) makes the Superhoard which is simed at the hobbyist market. Its memory capacity starts at 4K RAM and is expandable to 32K if you buy the add-on board.

Other machines in this family include the Challenger 1 and 4. These are essentially. cased versions of Superboard. The Challenger 4 is the cheapest of these at £575 and includes colour and sound options

PET Made by Commodore Business Machines, the Pet ranges from 8K RAM to 32K RAM. It is used mostly by small businesses for general applications but has a hefty hobbyist following. It is available from Commodore of Slough at a starting price of £460. Compatible peripherals are available for the Pet, including disc drives. cassettes for loading tapes and printers.

SHARP MZ-80K Popular with both business and home users, the Sharp's memory capacity starts at 16K and has a top limit of 48K. It comes with a monitor and a cassette recorder built onto the keyboard unit. Disk drives are also available. Manchesterbased Sharp Electronics have a recommended retail price of £460 for the 48K unit.

A ALLABLE IN THE UK

SHARP PC-1211 The smallest computer in the Sharp range. Sharp classifies it as a pocket computer and it is programmable in Basic. It also has a cassette interface for loading and costs upwards of £85.

SINCLAIR There are two types of Sinclair's microcomputer available for under £100. Sinclair really brought the microcomputer into the home. The machines are ideal for learning the rudiments of computing but are limiting graphically. The ZX80 has 1K of memory and is expandable up to 8K, but is no longer in production. The ZX81 sells for F49 95 for 1K in kit form or £69.95 ready assembled. The 16K RAM packs costs F49 95

SORCERER The Exidy Sorcerer is a home computer with a sizeable games following but it is one of the more expensive of the microcomputers, costing upwards of £749. Memory amount ranges from 48K to 55K and there is a plug-in ROM pack for extra capacity. Disc drives and visual display unit are an additional cost. Sorcerers can be obtained from a Cornish firm, Liveport of St

TANDY TRS-80 Tandy's TRS-80 Model 1 is a machine which is often used for games and is well-supplied with software for both entertainment and business applications. Its memory capacity goes from 4K to 16K but there is an expansion unit available upgrading it to 48K if you want the extra memory. The Model 1 is the cheapest of the Tandy range.

The Model 1 costs £459 but comes complete with a monitor to use as a V.D.U. and a cassette. The Model III is an integral unit made up of a keyboard, 12" screen and two slots for 51" discs. It costs from £499.

TANDY TRS-80 COLOUR COMPUTER Tandy's latest addition to its range of computers is the Extended Basic Micro Colour Computer (or TRS-80 Colour Computer for short). It is available with either 16 or 32K of memory and costs £449.

The actual computer unit consists of a keyboard which can be plugged into any television set. It is aimed at both business and games users and Tandy has bought out a variety of instant loading games program packages for the machine.

Joysticks needed to play some of the games are extra and cost £17.95 a pair. The colour computer can be obtained from Tandy stores nationwide.

TI-99/4A This computer has recently been re-launched by Texas Instruments. It consists of a separate keyboard with graphics facilities in full colour and now plugs in to a U.K. television. Software available for it from Texas Instruments is mostly business and educational but the firm has recently introduced a bundle of games to run on the computer, It has 16K RAM and uses tapes, discs or plug-in games cartridges. You can buy one of these from Bedford-based T.I. for £299 or from your local dealers.

VIC-20 The VIC is the much-publicised baby of the range of microcomputers from Commodore of Slough. At £185 it is one of the cheapest. Deliveries to dealers have just started. The VIC has full colour graphics on a colour T.V. and there are joysticks available. Although Commodore are plugging the business use of the machine it is tipped to be a hot games computer because of its colour graphics and low cost.

VIDEO GENIE The Genie is made by E.A.C.A. and is a popular games machine. It is compatible with the Tandy TRS-80 Model 1. With 16K to 48K RAM there are disc drives available. The basic unit costs from £369 and is available from Lowe Electronics of Matlock in Derbyshire.

GENIE 1 The replacement computer for the Video Genie is now available. The Genie 1 is an ungraded version of the Video Genie and has full upper and lower case, a machine language monitor, additional Basic, has a sound unit and is cassette hased It is being aimed at the serious hobbyist market and costs £229. A disc version is available called the Genie II and sells for £310 for the unit, £199 for the expansion box needed, and £225 for each disc drive.

U.K.101 This machine comes in either kit form or ready built with memory capacity of 4K to 40K (with an expansion board). It contains television and cassette interfaces so you don't need a V.D.U. The U.K.101 is a popular computer for playing games and there is a lot of software around for it. The kit costs £149 for 4K, ready built it sells for

ADVENTURE A type of game in which the player has to take a character role and retrieve a number of treasures or objects by a trial and error process giving instructions to the computer. The "hero" (or player) encounters a variety of hazards often taking the form of dangerous monsters, wizards and animals. Some adventure games are so complex that they take weeks. or months, to solve.

ALGORITHM A process or set of rules to carry out a task or solve a mathematical problem.

ARRAY A series of items (data or information) arranged to form a meaningful pattern.

ARROW KEYS The keys on a computer keyboard marked with arrows. Used for moving the cursor across, or up and down the V.D.U. screen. ASSEMBLY LANGUAGE A language

built up with memory codes designed to make programming easier. BUG A slang term given to a mistake in a computer program which prevents it from working. It can also refer to a

mechanical, electrical or electronic defect in a computer. BYTE A term to measure a number of Bits (Binary digiTS), usually eight bits

to a hyte CAPACITOR An electronic component. CHARACTER STRING A sequence of characters in a row.

CHIP A tiny piece of silicon which holds all the components that make up a microprocessor.

COMMAND In writing programs this word refers to an instruction word which specifies an operation which the computer must perform. COMPUTER LANGUAGE Languages

are used to make the computer perform operations. They consist of instructions or commands. There are different types of language for carrying out different tasks.

CONVERSATIONAL SCROLLING Data displayed on the screen involving sten-hy-sten communication between the user and the computer.

DEDICATED CHIP A chip (microprocessor) which has been specially programmed to perform a single or special group of applications, e.g. computer games. ROMs are usually the means by which dedicated chips are developed.

DISC A magnetic storage device. It can be either a hard or floppy disc. Hard discs can usually store more information than floopy discs and are used with mainframe computers. DISC DRIVE A unit which is connected

to the computer, used for loading the information stored on discs into the computer DISC STORAGE The method of storing

information on discs as opposed to cassettes. FURNCARD A type of printed circuit

board suited to circuits with a large number of chins FLOATING POINT This is a notation used for the calculation of numbers in

which the arithmetic point, binary or decimal, is movable but not necessarily the same for each number. FUNCTION A special purpose or

characteristic action GRAPHICS The name given to pictorial representation of data.

HARDWARF The general term given to all pieces of electronic and mechanical devices which make up a computer system, i.e. the actual machines.

HIGH RESOLUTION GRAPHICS A method of using Basic commands to move a drawing head to any position on the screen and drawing a line between two specified points. This facility is available on several makes of microcomputer. These graphics can be recreated in greater detail and to a higher degree of accuracy.

INPUT Information (data) fed into a computer. INTEGER A number which does not contain a decimal point, i.e. a whole

number INTERACTIVE A word used to describe a system which is capable of real-time man-machine communications.

K Abbreviation for kilobyte. KILOBYTE A measurement of memory capacity, 1024 bytes of memory, So 8K

is equivalent to 8192 bytes. LANGUAGE See "Computer Lanquage"

L.C.D. (Liquid Crystal Display) A display containing liquid crystals which light up when electricity touches them. Used in calculators and watches. L.E.D. (Light Emmitting Diode) Provides a simple display and consists of an electron tube which lights up when electricity is passed through it. Used A beginner's guide to plain jargon

as an alternative to liquid crystal. LOAD Putting information from auxiliary storage into internal storage of a computer. It can be either a complete program or any data. When you load a program you put the contents of the program into the computer's memory from storage either on a disc or a cassette.

LOOP A Basic function referring to the repeated execution of a series of instructions for a fixed number of times

MACHINE CODE The term used to refer to symbols or numbers assigned to parts of a machine.

MAINFRAME COMPUTER The jargon

work used to describe a very large computer. MEMORY A device which information

— data — can be copied into, stored, and later obtained from.

MICROCOMPUTER A tiny computer (as the name suggests) consisting of hardware and software. The main processing blocks are made of semiconcessing blocks are made of semicon-

ductor integrated circuits.

MINICOMPUTER This is a computer which offers memory ranging from 4K to 64K and are characterised by giving a higher performance than microcomputers or programmable calculators.

MONOCHROME COMPUTER DISPLAY A disolay screen used in a computer

which shows a picture in one tone or black and white only.
NUMBER CRUNCHING The operation in computing which carries out the arithmetic and logical processes which information has to go through.
NUMERIC KEYPAD This is a section of

the keyboard consisting of a small number of keys. They differ from alphanumeric keys because the numeral, decimal point, and enter keys transmit unique escape sequences. OUTPUT Data which is emitted from a computer system, either on the screen

or in printout form.

PEEK A statement used in Basic which allows you to read the contents of a specified memory address.

PERIPHERALS Équipment which is used with a computer, e.g. printers, V.D.U.s and disc drives.

POKE An instruction used in most versions of Basic allowing you to store integers in a specific place in memory. R.A.M. (Random Access Memory) This is a memory chip which you can load programs and data to and from. RANDOMISE A Basic command referring to the procedure for making numbers, data, or events occur at random.

bers, data, or events occur at random.

RANDOM NUMBER A number selected at random from an ordered set of numbers.

RFALTIME This is on-the-spot comput-

REAL TIME. This is of-time-spot computing when the operation is performed during the time an event is taking place in time to influence the result. ROM (Read Only Memory) A memory chip which can only be read from and not written into.

ROUTING Is the method of calling up on screen information in Prestel. On the back of each Prestel page is information in the form of lists of numbers which the computer searches to find the number of the page the user wants to move to next.

ROUTINE A set of coded computer instructions used for a particular function in a program.

SOFTWARE Another name for compu-

ter programs. It can also refer to computer documentation. STATEMENT an instruction in a com-

puter program.

STRING A connected sequence of characters, words or other elements usually symbolised with the dollar sign.

SYNTAX The name used to refer to sentence structure rules of programming language. VALUE The numerical quantity of a

data element, and is the number assigned to a variable.

VARIABLE A symbol whose numeric value can be changed at all times. It is

used when writing programs.

V.D.U. (Visual Display Unit) A unit which is capable of showing data. They

The best enhancement yet for the ZX enthusiast - for just £9!

What is the best way to guarantee that you never become bored with your Sinclair computer?

The answer is to subscribe to Sinclair User ... written specifically for owners of ZX 80's and ZX 81's. Sinclair User is the latest monthly from ECC Publications pioneers of Practical Computing, WHICH COMPUTER?, and Computer & Video Games. Whether you bought your system vesterday or are an old hand, you are probably an enthusiast for your machine. And your biggest problem is likely to be obtaining all the information to satisfy your interest. We promise that Sinclair User will be devoted entirely to quenching your thirst for information.

Issue one is Published on 1 April and is an absolute must for Sinclair devotees. So make sure you guarantee that you get your copy by taking out a subscription now.

As the name suggests, the content will be geared specifically to helping the user. There will be pages of information on available hardware and software. Our expert writers will analyse established products to help you make the right choice. There will be exclusive prerelease sninnets on products which are about to hit the market. Our aim is to make Sinclair User invaluable and we will chronicle applications which are of special interest. For example, in the first issue we will look at husiness applications and we visit a school where the nunils are having the time of their lives using their Sinclairs. Each month we will carry eight pages of programs. Another must for every user is our first-rate helpline service. And we intend to carry as much information as possible about clubs.

Last but not least let us say that the best way you can guarantee you like the magazine is by participating yourself. Don't forget to ask us your queries; send in your programs - for which we will pay £10 if we publish and he sure to tell us if you are using your ZX 81 in a special way. Send in your club news and tell us of any interesting people out there in userland. And just in case you need further convincing, look at the editorial plans for the first six issues.

Can you continue to get the most out of your ZX without reading the Sinclair User? So why not fill in the subscription order form today?
